# Subject Index of Volumes 153–156

A356
Microstructural evolution and rheological behaviour of aluminium alloys A356, and A356 + 0.5% Sn designed for thixocasting, 1623
Thixoextrusion of an A356 alloy: microstructural studies and high temperature fatigue behaviour, 1629
AA 6082 aluminum alloy
The prediction of seam welds quality in aluminum extrusion, 366
AA6082 alloy
Effect of the heat treatment on the hot deformation behaviour of AA6082 alloy, 881
Abrasive waterjet
A study of abrasive waterjet characteristics by CFD simulation, 488
Abrasives
Development of a padless ultraprecision polishing method using electrorheological fluid, 1293
Acid environment
Life prediction under sulfuric acid environment of FRP using X-ray analysis microscope, 1558
Adhesion
Effect of substrate crystallographic orientation on wettability and adhesion in several representative systems, 1256
Adhesive bonding
Thermal stresses developed in weld-bonded joints, 971
Adhesive joints
The effect of surface pretreatment and moisture on the fatigue performance of adhesively-bonded aluminium, 359
Aerospace metals
The mechanochemical processing of aerospace metals, 472
AFM
Oxide scales growth of low-carbon steel at high temperatures, 1300
Atomic force microscopy-based nano-lithography for nano-patterning: a molecular dynamic study, 1847
Ageing
Constitutive modelling of primary creep for age forming an aluminium alloy, 122
Long-term ageing behaviour of martensite in shape memory Cu–Al–Ni alloys, 164
Ageing time
Ageing time of wettability on polypropylene surfaces processed by cold plasma, 519
Aging
Effect of prestraining and strain-aging on toughness of MnMoNi steel weld metal, 1124
Air unit
A new process of gas-assisted injection molding for faster cooling, 1201
Al–10%$SiC_P$
Electric discharge machining of Al–10%$SiC_P$ as-cast metal matrix composites, 1653
Al–Li alloy sheets
Effect of heat treatment on the tensile properties of Al–Li alloys, 603
Alloyed agglomerated powders
Submerged arc surfacing of Ni–Co–Mo alloys similar to maraging steels on a structural steel, 2011
The use of factorial design and response surface methodology for fast determination of optimal heat treatment conditions of different Ni–Co–Mo surfaced layers, 2026
Alloyed steels
Casting of a cold work steel alloy in semi-solid state, 1357
Alloying
Application of high power diode laser (HPDL) for alloying of X40CrMoV5-1 steel surface layer by tungsten carbides, 1956
$Al_2O_3$/SiC
The low velocity impact loading of $Al_2O_3$/SiC whisker reinforced ceramic composite, 1986
Al–SiC
Electric discharge machining of Al–SiC metal matrix composites using rotary tube electrode, 978
AlSiC MMC
Elastic–plastic behaviour of an AlSiC MMC rod under combined tension and torsion loading, 1756
Mechanical behaviour of SiC reinforced aluminium thin walled tube under combined axial and torsional loading, 1760
Alumina ceramic
Machining a smooth surface of ceramic material by laser fracture machining technique, 1797
Aluminide
Hot extrusion reaction synthesis of nickel, titanium and iron aluminides, 630
Aluminium
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
2025 Aluminium alloys
The influence of hot deformation on the exfoliation corrosion behaviour of aluminium alloy 2025, 185
Aluminium alloys
Effect of macrostructure and microstructure on the viscosity of the A356 alloy in the semi-solid state, 300
Residual stress reduction in 7175-T73, 6061-T6 and 2017A-T4 aluminium alloys using quench factor analysis, 346
The application of advances in quench factor analysis property prediction to the heat treatment of 7010 aluminium alloy, 674
Effect of precipitation during quenching on the mechanical properties of the aluminium alloy 7010 in the W-temper, 998
Aluminium bronze
The effect of cyclic strain path on the properties and structure of CuAl10 aluminium bronze, 1138
Aluminium carbide
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Aluminium oxide
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Aluminium–metal matrix composite
Optimization by Grey relational analysis of EDM parameters on machining Al–10%$SiC_P$ composites, 1658

Elsevier B.V.
doi:10.1016/S0924-0136(04)01224-5

Aluminum
The mechanochemical processing of aerospace metals, 472
Aluminum alloys
Effect of copper and solidification conditions on the microstructure and mechanical properties of Al–Si–Mg alloys, 193
AlYNiSi alloys
Thermal stability and mechanical properties of Al-based amorphous alloys, 829
Amorphous
Thermal stability and mechanical properties of Al-based amorphous alloys, 829
Effects of process variables on the multi-strand casting of high strength sub-millimetre metallic glass wire, 1344
Analysis of variance
Optimization of shot peening parameters using Taguchi technique, 925
Analysis of variance (ANOVA)
Drilling fiber reinforced plastics (FRPs) manufactured by hand lay-up: influence of matrix (Viapal VUP 9731 and ATLAC 382-05), 1828
Analytical thermal modelling
A semi-empirical model of the temperature field in the AISI 304 laser welding, 1235
ANFIS
Design of ANFIS networks using hybrid genetic and SVD methods for the modelling of explosive cutting process, 1415
Anisotropic magnets
Processing of high-performance anisotropic permanent magnets by die-upset forging, 508
Anisotropy
Influence of the plasticity model in sheet metal forming simulations, 1596
Wrinkling of anisotropic metal sheets under deep-drawing: analytical and numerical study, 1604
Ankle
Biomechanical evaluation of external ankle arthrodesis contact area and pressure distribution, 174
ANOVA
Analysis of P/M hollow extrusion using design of experiments, 416
ANSYS APDL
Expert system for process planning of pressure vessel fabrication by deep drawing and ironing, 1465
Applied load
Analysis of the elastic characteristics at die and workpiece to improve the dimensional accuracy for cold forged part, 1081
Artery
Finite element simulation of slotted tube (stent) with the presence of plaque and artery by balloon expansion, 1772
Arthrodesis
Biomechanical evaluation of external ankle arthrodesis contact area and pressure distribution, 174
Artificial intelligence
Evaluation of the aesthetics of products and integration of the findings in a proposed intelligent design system, 380
As-cast metal matrix composites
Electric discharge machining of Al–10%$SiC_P$ as-cast metal matrix composites, 1653
Assembly
Application of numerical analysis to the optimisation of electronic component reliability screening and assembly processes, 1788
Assisting gas
Jet impingement onto a conical hole in relation to laser machining, 2039
Laser cutting quality assessment and thermal efficiency analysis, 2106
Asymmetrical rolling
Forming of band curvature in asymmetrical rolling process, 2033
Atomic force microscopy
Characterisation of electrodeposited nickel nanowires using NCA template, 811
Austempering
Electron beam surface melting of as cast and austempered ductile irons, 199
The role of austempering parameters on the structure and mechanical properties of heavy section ADI, 203
Austenitic manganese steel
Development of high-manganese steels for heavy duty cast-to-shape applications, 589
Weldability of austenitic manganese steel, 596
Auto regressive moving average
Natural mode estimation of cutting dynamics with time series modelling, 1373
Autofrettage
Expert system for process planning of pressure vessel fabrication by deep drawing and ironing, 1465
Automated material handling systems
Generic tool for modelling and simulation of semiconductor intra-bay material handling system, 1927
Automotive
Tribological (wear) properties of aluminum–silicon eutectic base alloy under dry sliding condition, 833
Injection moulding of automotive components: comparison between hot runner systems for a case study, 1497
Automotive industry
Stamping of automotive components: a numerical and experimental investigation, 1489

Backpropagation
Development of machine learning strategy for acquiring on-line machining skills during turning process, 2087
Backward extrusion
Estimate of consumed energy at backward extrusion process by means of modelling approach, 907
Ball end milling
The optimal cutter orientation in ball end milling of cantilever-shaped thin plate, 900
Balloon
Finite element simulation of slotted tube (stent) with the presence of plaque and artery by balloon expansion, 1772
Band curvature
Forming of band curvature in asymmetrical rolling process, 2033
Bead shape
A semi-empirical model of the temperature field in the AISI 304 laser welding, 1235
Bearing curve parameters
Polishing pad surface characterisation in chemical mechanical planarisation, 666
Beryllium copper
High-strain-rate testing of beryllium copper at elevated temperatures, 1051
Bevel gear
Distortions induced by heat treatment of automotive bevel gears, 476
Bi-axial load
The significance of weld imperfections and surface peening on fatigue crack propagation life of butt-welded joints, 931
Bimetal
Theoretical analysis of bimetallic rods extrusion process in double reduction die, 583
Bimetallic rods
Theoretical and experimental analysis of the rolling process of bimetallic rods Cu-steel and Cu-Al, 100
Biomechanics
Biomechanical evaluation of external ankle arthrodesis contact area and pressure distribution, 174

Biomimetic design
Static load dispersion analysis of solid–air composites. Effect of adhesive film on the load dispersion, .1551
Guidelines for the preparation of design concept of biomimetic composites, 1590
Blades
Rejuvenation of an inconel alloy used in gas turbines, 2051
Blank modification
Process design and blank modification in the multistage rectangular deep drawing of an extreme aspect ratio, 778
Blanking operation
Investigation on blanking of thin sheet metal using the ductile fracture criterion and its experimental verification, 1935
Blind rivet
FEA modelling of setting and mechanical testing of aluminum blind rivets, 74
Bonding strength
HVOF coating of Inconel 625 onto stainless and carbon steel surfaces: corrosion and bond testing, 2051
Boron
Microstructure and properties of the new Pt–Rh based alloys for high-temperature applications, 681
Brinell hardness
Analysis of the influence of chemical composition on the mechanical and metallurgical properties of engine cylinder blocks in grey cast iron, 1039
Built-up edge
Effect of microstructure and hardness on the machinability of medium-carbon chrome-molybdenum steel, 48
Bulk forming
Friction modelling for the physical simulation of the bulk metal forming processes, 151
Lubricant flow between rough surfaces during closed-die forming, 707
Bump bonding
Investigation of Sn–Pb solder bumps of prototype photo detectors for the LHCb experiment, 1668

Calcium carbonate
Influence of filler particles on deformation and fracture mechanism of isotactic polypropylene, 1459
Cantilever-shaped plate
The optimal cutter orientation in ball end milling of cantilever-shaped thin plate, 900
Carbides
Precipitation of carbides and sigma phase in AISI type 446 stainless steel under working conditions, 1681
Carbon–carbon composite
Modelling of machinability parameters of carbon–carbon composite—a response surface approach, 920
Carburization
Effects of molybdenum and nickel additions on the structure and properties of carburized and hardened low carbon steels, 1972
Carriers migration
A model of the trapping media in *micro*FLASH® memory cells, 179
Case hardness
Effects of molybdenum and nickel additions on the structure and properties of carburized and hardened low carbon steels, 1972
Casting
Effects of casting process variables on the residual stress in Ni-base superalloys, 209
Casting surface finish
Vibration and casting surface finish, 875
Causal reasoning
Failure modes and effects analysis through knowledge modelling, 253
Cavitation
Analysis of void growth in superplastic materials, 1273
Cavity resonator
2.45 GHz microwave plasma system for high-velocity thermal spraying, 294
CBN grinding wheels
Machining characteristics of mold material in high-speed grinding, 1189
CCDR–ECAP
A method for continuous processing of materials by ECAP processes, 2126
CCT diagram
Austenite transformation and age hardening of HSLA-80 and ULCB steels, 1513
Application of neural networks for prediction of critical values of temperatures and time of the supercooled austenite transformations, 1950
Center carrier type progressive die
A study on the development of center carrier type progressive die for U-bending part process, 1005
Centerless grinding
Development of an ultrasonic elliptic-vibration shoe centerless grinding technique, 1780
Ceramic composites
The low velocity impact loading of $Al_2O_3$/SiC whisker reinforced ceramic composite, 1986
Ceramics
An atmospheric microwave plasma jet for ceramic material processing, 288
Prediction of high temperature demixing in oxides in an electric field or an oxygen potential gradient, 771
Defects and prevention in ceramic components fabricated by inkjet printing, 1286
Cermets tools
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
CFD
A study of abrasive waterjet characteristics by CFD simulation, 488
Application of numerical analysis to the optimisation of electronic component reliability screening and assembly processes, 1788
Channel
Computer simulation of the thermal regime of double-loop channel induction furnaces, 386
Computer simulation of the thermal regime of double-loop channel induction furnaces, 2093
Chemical vapour deposited diamond
Electrical discharge machining of conductive CVD diamond tool blanks, 1227
Chromium
Ductile–brittle transition behavior of rolled chromium, 93
Chromium carbide
Tribological characteristics and cutting performance of $Cr_{x\%}C$-coated carbide tools, 699
Circular coordinate plots
Quick check error verification of coordinate measuring machines, 1207
Circular-to-rectangular duct transitions
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Closed die forging
A new CAD system for finisher die design of an axisymmetric forging component with arbitrary profile, 157
Application of the slip-line field method to the analysis of die cavity filling, 729
Closed-die-upsetting
Analysis of the elastic characteristics at die and workpiece to improve the dimensional accuracy for cold forged part, 1081

CMM
Quick check error verification of coordinate measuring machines, 1207
Coating
HVOF coating of Inconel 625 onto stainless and carbon steel surfaces: corrosion and bond testing, 2051
Cold expansion
Finite element analysis of the residual stress by cold expansion method under the influence of adjacent holes, 986
Cold forging
Construction of PC-based expert system for cold forging process design, 1583
Cold forming
Knowledge-based process selection for rotationally symmetric and rotationally non-symmetric components in cold forming, 338
Cold plasma
Ageing time of wettability on polypropylene surfaces processed by cold plasma, 519
Cold roll forming
Cold roll forming for high tensile strength steel sheet proposition on forming of thin spring steel sheet pipe, 247
Cold rolling
Efficient algorithmic approach for mixed-lubrication in cold rolling, 307
Modelling of work roll edge contact in thin strip rolling, 1280
Cold strip rolling process
Interdependence between the rolling speed and non-linear vibrations of the mill system, 2116
Collaborative design
A human–computer system for collaborative design (HCSCD), 1964
Colloidal suspension
Study on mechanism of mechanical damping system based on the colloidal suspension of nano-porous particles, 565
Color etching
Casting of a cold work steel alloy in semi-solid state, 1357
Colour edge detection
Study of plastic deformation modes in zirconium by color image analysis, 281
Combined high and low cycle fatigue
The effect of combined cycle fatigue upon the fatigue performance of TI–6AL–4V fan blade material, 374
Combined tension and torsion
Elastic–plastic behaviour of an AlSiC MMC rod under combined tension and torsion loading, 1756
Mechanical behaviour of SiC reinforced aluminium thin walled tube under combined axial and torsional loading, 1760
Common rail system
Simulation of the magnetic properties for common rail electro-injector, 1611
Complexity index
A new definition of shape complexity for metal extrusion, 1734
Composite
Development of polymer–ceramic composites for improved fire resistance, 401
Thermal properties of diamond particle-dispersed Cu composites, 514
Influence of filler particles on deformation and fracture mechanism of isotactic polypropylene, 1459
Processing of novel glass matrix composites by microwave heating, 1749
Composite camshaft
Manufacturing of composite workpieces with rolling tools, 323
Composite material
Expert system for process planning of pressure vessel fabrication by deep drawing and ironing, 1465
Compounds
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Compressive load support
Guidelines for the preparation of design concept of biomimetic composites, 1590
Computational fluid dynamics
Evolution of void growth around cylindrical inclusions using the VOF technique, 608
Computer
Computer simulation of the thermal regime of double-loop channel induction furnaces, 386
Computer simulation of the thermal regime of double-loop channel induction furnaces, 2093
Computer model of dielectric
A model of the trapping media in *micro*FLASH® memory cells, 179
Computer modeling
Modeling the thermal and thermoelastic responses of work rolls used for hot rolling steel strip, 886
Computer-aided design
A new CAD system for finisher die design of an axisymmetric forging component with arbitrary profile, 157
Computer-aided-design
Development of a computer-aided-design system of cold forward extrusion of a spur gear, 821
Computerised maintenance management systems (CMMSs)
Implementation and benefits of introducing a computerised maintenance management system into a textile manufacturing company, 226
Conceptual design
Failure modes and effects analysis through knowledge modelling, 253
Concurrent engineering
A human–computer system for collaborative design (HCSCD), 1964
Conductive ceramics
A study on the electrical discharge machining of conductive ceramics, 1033
Cone-cap model
A constitutive model for finite deformation of endochronic plasticity in powder forming processes, 12
Connector
Material selection in the design of electrical connectors, 213
Constant angle of twist
Mechanical behaviour of SiC reinforced aluminium thin walled tube under combined axial and torsional loading, 1760
Constant axial displacement
Mechanical behaviour of SiC reinforced aluminium thin walled tube under combined axial and torsional loading, 1760
Constitutive equation
Constitutive modelling of primary creep for age forming an aluminium alloy, 122
Dynamic mechanical behavior of pure titanium, 1889
Constitutive model
Representing the superplasticity of Inconel 718, 694
Determination of work material flow stress and friction for FEA of machining using orthogonal cutting tests, 1019
Contact
Biomechanical evaluation of external ankle arthrodesis contact area and pressure distribution, 174
Resistance spot welding simulation: a general finite element formulation of electrothermal contact conditions, 436
Contact angle
Effect of substrate crystallographic orientation on wettability and adhesion in several representative systems, 1256
Continuous casting
Twin roll casting of aluminum alloy strips, 42

Two-dimensional thermomechanical analysis of continuous casting process, 578
Continuous ECAP
A method for continuous processing of materials by ECAP processes, 2126
Continuous yielding
The effect of intercritical heat treatment on the mechanical properties of AISI 3115 steel, 482
Control system
A study on genetic algorithm to select architecture of a optimal neural network in the hot rolling process, 643
Controlled Vickers crack growth
Fracture resistance behavior of alumina–zirconia composites, 868
Conveying pipes
Modeling of steel microstructure evolution during thermo-mechanical rolling of plate for conveying pipes, 432
Cooling rate
Effect of copper and solidification conditions on the microstructure and mechanical properties of Al–Si–Mg alloys, 193
Copper
Preparation of nickel and copper submicrometer particles by pyrolysis of their formates, 1058
Austenite transformation and age hardening of HSLA-80 and ULCB steels, 1513
Core pitch
Fabrication of a V-groove on the optical fiber connector using a miniaturized machine tool, 1716
Cored wires
Submerged arc surfacing of Ni–Co–Mo alloys similar to maraging steels on a structural steel, 2011
The use of factorial design and response surface methodology for fast determination of optimal heat treatment conditions of different Ni–Co–Mo surfaced layers, 2026
Corrosion
HVOF coating of Inconel 625 onto stainless and carbon steel surfaces: corrosion and bond testing, 2051
Cortical bone
Guidelines for the preparation of design concept of biomimetic composites, 1590
Coulomb correlation effects
A model of the trapping media in *micro*FLASH® memory cells, 179
CPVC
Effects of injection molding weld on fatigue crack resistance of CPVC at different temperatures, 1261
Crack growth retardation
Experimental study on the influence of overload induced residual stress field on fatigue crack growth in aluminium alloy, 945
Crack length
Fatigue properties of inertia dissimilar friction-welded stainless steels, 1402
Crack propagation
Effects of injection molding weld on fatigue crack resistance of CPVC at different temperatures, 1261
Crack tip opening displacement (CTOD)
Fracture mechanics evaluation of a 0.5Mo carbon steel subjected to high temperature hydrogen attack, 938
Creep
Constitutive modelling of primary creep for age forming an aluminium alloy, 122
A coupled temperature–displacement model for predicting the long-term performance of offshore pipeline insulation systems, 1242
Critical coolant pressure
Effect of high-pressure coolant supply when machining nickel-base, Inconel 718, alloy with coated carbide tools, 1045
Critical crack length
Fracture mechanics evaluation of a 0.5Mo carbon steel subjected to high temperature hydrogen attack, 938
Critical elasto-plastic
Elastic–plastic behaviour of an AlSiC MMC rod under combined tension and torsion loading, 1756
Cross-sectional ratio
Influence of pitch and cross-sectional ratio of strip of sheet metal on incremental in-plane bending, 1810
Cross-wedge rolling
The aspects of stability in cross-wedge rolling processes of hollowed shafts, 1867
Crystallographic orientation
Effect of substrate crystallographic orientation on wettability and adhesion in several representative systems, 1256
Cube array artifact
Reduction of machining errors of a three-axis machine tool by on-machine measurement and error compensation system, 2056
*R*-curve
Fracture resistance behavior of alumina–zirconia composites, 868
Cut
Machining characteristics of novel-abrasion resistant iron, 751
Cut quality
Laser cutting quality assessment and thermal efficiency analysis, 2106
Cutter orientation
The optimal cutter orientation in ball end milling of cantilever-shaped thin plate, 900
Cutting
Effect of microstructure and hardness on the machinability of medium-carbon chrome-molybdenum steel, 48
Identification of cutting errors in precision hard turning process, 746
Laser cutting quality assessment and thermal efficiency analysis, 2106
Cutting and indentation
Cutting sharpness measurement: a critical review, 261
Cutting conditions
Integrity of ground cylindrical surface, 714
The impact of cutting conditions on cutting forces and vibration signals in turning with plane face geometry inserts, 1708
Cutting dynamics
Natural mode estimation of cutting dynamics with time series modelling, 1373
Cutting fluid
Comparison of gases applications to wet and dry cuttings in turning, 35
Cutting force
Comparison of gases applications to wet and dry cuttings in turning, 35
Tool cutting force modeling in ball-end milling using multilevel perceptron, 268
The impact of cutting conditions on cutting forces and vibration signals in turning with plane face geometry inserts, 1708
Cutting performance
Tribological characteristics and cutting performance of $Cr_{x\%}C$-coated carbide tools, 699
Cutting speed
Electrical discharge machining of conductive CVD diamond tool blanks, 1227
Cutting temperature
Effect of high-pressure coolant supply when machining nickel-base, Inconel 718, alloy with coated carbide tools, 1045
Cyclic plasticity
Numerical determination of carrying capacity of large rolling bearings, 1696

Cyclic response
Modeling the thermal and thermoelastic responses of work rolls used for hot rolling steel strip, 886

Damage
Comparison of ductile failure models using a simple elastic–plastic based degradation model, 1214
Numerical determination of carrying capacity of large rolling bearings, 1696
Data sharing
A human–computer system for collaborative design (HCSCD), 1964
Database
Web-based material properties for use with metalforming simulation packages, 688
DBTT
Ductile–brittle transition behavior of rolled chromium, 93
Deep drawing
Optimisation of magnesium alloy stamping with local heating and cooling using the finite element method, 319
Development of process design system for press forming—multi-objective optimization of intermediate die shape in transfer forming, 1564
Deep hole drilling
Manufacturing of composite workpieces with rolling tools, 323
Defects
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Defects and prevention in ceramic components fabricated by inkjet printing, 1286
Deflection
The optimal cutter orientation in ball end milling of cantilever-shaped thin plate, 900
Deformation
Influence of filler particles on deformation and fracture mechanism of isotactic polypropylene, 1459
Deformation twinning
Anomalous plastic behavior of fine-grained MP35N alloy during room temperature tensile testing, 1905
Degradation
Comparison of ductile failure models using a simple elastic–plastic based degradation model, 1214
Delamination
Drilling fiber reinforced plastics (FRPs) manufactured by hand lay-up: influence of matrix (Viapal VUP 9731 and ATLAC 382-05), 1828
Demixing
Prediction of high temperature demixing in oxides in an electric field or an oxygen potential gradient, 771
Departure from equilibrium
The mechanochemical processing of aerospace metals, 472
Design for aesthetics
Evaluation of the aesthetics of products and integration of the findings in a proposed intelligent design system, 380
Design for environment
Evaluation of the aesthetics of products and integration of the findings in a proposed intelligent design system, 380
Design of experiments
Analysis of P/M hollow extrusion using design of experiments, 416
Dexterious Robot Hand
Development of shape memory actuated ITU Robot Hand and its mine clearance compatibility, 1390
Diamond
Thermal properties of diamond particle-dispersed Cu composites, 514
Diamond tip
Fabrication of a V-groove on the optical fiber connector using a miniaturized machine tool, 1716
Die design
Numerical visualization of viscosity in phase transformation forming process with controlled liquid fraction, 450
Die gages
A low cost knowledge base system framework for progressive die design, 958
Die life/failure
A probabilistic study of failures of solid and hollow dies in hot aluminum extrusion, 1740
Die profile
A new definition of shape complexity for metal extrusion, 1734
Die vibration
Vibration and casting surface finish, 875
Die–casting interface
Vibration and casting surface finish, 875
Dieless
Dieless wire drawing—an experimental and numerical analysis, 1178
Dies
Experimental and numerical investigation of the weld repair of superplastic forming dies, 1673
Diesel
Simulation of the magnetic properties for common rail electro-injector, 1611
Die-sinking EDM
A study on the electrical discharge machining of conductive ceramics, 1033
Die-upset forging
Processing of high-performance anisotropic permanent magnets by die-upset forging, 508
Difficult-to-cut material
Grinding characteristics of conventional and ELID methods in difficult-to-cut and hardened brittle materials, 1196
Diffusion
Microstructural instability in coated single crystal superalloys, 660
Monte Carlo simulation of the effective thermal conductivity in two-phase material, 741
Prediction of high temperature demixing in oxides in an electric field or an oxygen potential gradient, 771
Diffusion index
Tool wear prediction in turning, 276
Dilution
Effects of temperature and shielding gas mixture on fatigue life of 5083 aluminum alloy, 1408
Direct
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
Discontinuous chips
A FEM study on mechanisms of discontinuous chip formation in hard machining, 1350
Dislocation
Simulation of metal forming during multi-pass rolling of shape bars, 108
Dissimilar friction welding
Fatigue properties of inertia dissimilar friction-welded stainless steels, 1402
Distortion
Distortions induced by heat treatment of automotive bevel gears, 476
DLC
Characterization of DLC coatings deposited by rf magnetron sputtering, 804
DMTA
The nature of the amorphous phase in resultant engineering products, 1428
DOE
Analysis of the influence of EDM parameters on surface quality, MRR and EW of WC–Co, 1026

A study on the electrical discharge machining of conductive ceramics, 1033
Drawing
Dieless wire drawing—an experimental and numerical analysis, 1178
Energetic analysis of the drawing process by upper-bound techniques, 1220
Drilling
Drilling of conventional cast stainless steel with HIPed NiTi coating, 622
Machining characteristics of electroslag cast steel for hot-working tools, 654
Drilling fiber reinforced plastics (FRPs) manufactured by hand lay-up: influence of matrix (Viapal VUP 9731 and ATLAC 382-05), 1828
DSC
The nature of the amorphous phase in resultant engineering products, 1428
Dual-phase steel
The effect of intercritical heat treatment on the mechanical properties of AISI 3115 steel, 482
Duct bends
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Duct flow
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Ductile fracture
Evolution of void growth around cylindrical inclusions using the VOF technique, 608
Ductile iron
Electron beam surface melting of as cast and austempered ductile irons, 199
The role of austempering parameters on the structure and mechanical properties of heavy section ADI, 203
Duplex-coating
The effect of coating and nitriding on the wear behaviour of tool steels, 1918
DXRL
Fabrication of a polymer microstructure by a modified DXRL process, 1097
Dynamic behavior
Dynamic mechanical behavior of pure titanium, 1889

EBSD technique
Study of plastic deformation modes in zirconium by color image analysis, 281
ECAE
Finite element modelling of an Al–Mn alloy by equal channel angular extrusion (ECAE), 846
EDM
Electric discharge machining of Al–SiC metal matrix composites using rotary tube electrode, 978
Analysis of the influence of EDM parameters on surface quality, MRR and EW of WC–Co, 1026
Optimization by Grey relational analysis of EDM parameters on machining Al–10%$SiC_P$ composites, 1658
Efficiency
Laser cutting quality assessment and thermal efficiency analysis, 2106
Ejecting
Analysis of the elastic characteristics at die and workpiece to improve the dimensional accuracy for cold forged part, 1081
Elastic recovery
Improved prediction of springback on final formed components, 464
Elasto-plastic FEA
FEA modelling of setting and mechanical testing of aluminum blind rivets, 74
Electric discharge machining
Modeling of surface finish in electro-discharge machining based upon statistical multi-parameter analysis, 1247
Electric discharge machining of Al–10%$SiC_P$ as-cast metal matrix composites, 1653
Electrical discharge machining
Electrical discharge machining of conductive CVD diamond tool blanks, 1227
Electro-injector
Simulation of the magnetic properties for common rail electro-injector, 1611
Electrokinetics
Resistance spot welding simulation: a general finite element formulation of electrothermal contact conditions, 436
Electrolytic in-process dressing (ELID)
Grinding characteristics of conventional and ELID methods in difficult-to-cut and hardened brittle materials, 1196
Electronic component
Application of numerical analysis to the optimisation of electronic component reliability screening and assembly processes, 1788
Electrorheological fluid
Development of a padless ultraprecision polishing method using electrorheological fluid, 1293
Electroslag casting
Machining characteristics of electroslag cast steel for hot-working tools, 654
Thermal shock resistance of electroslag cast steel for hot-working tools, 2122
Elevated temperatures
High-strain-rate testing of beryllium copper at elevated temperatures, 1051
Elongating grooves
Theoretical and experimental analysis of the rolling process of bimetallic rods Cu-steel and Cu-Al, 100
End milling
A flexible force model for end milling of low-rigidity parts, 134
Endochronic model
A constitutive model for finite deformation of endochronic plasticity in powder forming processes, 12
Energy dissipation
Study on mechanism of mechanical damping system based on the colloidal suspension of nano-porous particles, 565
Engine
Simulation of the magnetic properties for common rail electro-injector, 1611
Engine cylinder block
Analysis of the influence of chemical composition on the mechanical and metallurgical properties of engine cylinder blocks in grey cast iron, 1039
Engineering
Engineering of surface layer in material removal machining, 1451
Enhanced assumed strain finite element method
Numerical simulation of springback using enhanced assumed strain elements, 314
Environmental scanning electron microscopy
Characterisation of microstructural evolutions in refractory castables by in situ high temperature ESEM, 1474
Environmentally friendly machining
Development and verification of a computer model for thermal distortions in hard turning, 1821
Epoxy resins
Experimental studies on comparison of microwave curing and thermal curing of epoxy resins used for alternative mould materials, 1532

Erichsen number
Effect of rheocast and thixocast characteristics of eutectic Lead–Tin alloy sheet on deep drawing, 637
Erosion
A comparison of elevated temperature erosion resistance of four new HVCC coatings with other wire sprayed coatings, 7
Erosion mechanism
A comparison of elevated temperature erosion resistance of four new HVCC coatings with other wire sprayed coatings, 7
Error compensation
Reduction of machining errors of a three-axis machine tool by on-machine measurement and error compensation system, 2056
Exfoliation corrosion
The influence of hot deformation on the exfoliation corrosion behaviour of aluminium alloy 2025, 185
Expansion
Effect of material internal pressure in curing process of SMC roll forming, 1577
Experiment
New method of thread rolling, 722
Estimate of consumed energy at backward extrusion process by means of modelling approach, 907
Expert system
An expert system based on FBFN using a GA to predict surface finish in ultra-precision turning, 1150
Construction of PC-based expert system for cold forging process design, 1583
Explosive cutting process
Design of ANFIS networks using hybrid genetic and SVD methods for the modelling of explosive cutting process, 1415
External turning
Determination of the optimum TiN coating thickness on WC inserts for machining carbon steels, 1861
Extreme aspect ratio
Process design and blank modification in the multistage rectangular deep drawing of an extreme aspect ratio, 778
Extrusion
The prediction of seam welds quality in aluminum extrusion, 366
Estimation of extrusion stress for sintered P/M preforms-nomogram approach, 420
Theoretical analysis of bimetallic rods extrusion process in double reduction die, 583
Hot extrusion reaction synthesis of nickel, titanium and iron aluminides, 630
Feature-based design of extrusion process using upper-bound and finite element techniques for extrudable shapes, 1365
A probabilistic study of failures of solid and hollow dies in hot aluminum extrusion, 1740
Extrusion ratio
Development of a computer-aided-design system of cold forward extrusion of a spur gear, 821

Factorial designs
The use of factorial design and response surface methodology for fast determination of optimal heat treatment conditions of different Ni–Co–Mo surfaced layers, 2026
Failure of tools
Stability criteria and break out of grains of super-hard of grinding tools, 2007
Fastener hole
Finite element analysis of the residual stress by cold expansion method under the influence of adjacent holes, 986
Fatigue
On the resistance spot weldability of galvanized interstitial free steel sheets with austenitic stainless steel sheets, 1
The effect of surface pretreatment and moisture on the fatigue performance of adhesively-bonded aluminium, 359
The effect of single and multiple overloads on the fatigue crack growth of high strength titanium aluminides, 615
Fatigue crack propagation life
The significance of weld imperfections and surface peening on fatigue crack propagation life of butt-welded joints, 931
Fatigue life
Fatigue properties of inertia dissimilar friction-welded stainless steels, 1402
Effects of temperature and shielding gas mixture on fatigue life of 5083 aluminum alloy, 1408
FBFN
An expert system based on FBFN using a GA to predict surface finish in ultra-precision turning, 1150
FE model
Thermal stresses developed in weld-bonded joints, 971
FEA simulation
Web-based material properties for use with metalforming simulation packages, 688
Feature recognition
Feature-based design of extrusion process using upper-bound and finite element techniques for extrudable shapes, 1365
FEM
Theoretical and experimental analysis of the rolling process of bimetallic rods Cu-steel and Cu-Al, 100
3D FEM modelling and its experimental verification of the rolling of reinforcement rod, 115
Computational mechanics of laser cladding process, 494
Influence of some relevant process parameters on the dimensional accuracy in incremental forming: a numerical and experimental investigation, 501
Numerical prediction of bursting failure in tube hydroforming by the FEM considering plastic anisotropy, 544
New method of thread rolling, 722
FEM simulation of the thermomechanical behaviour of the refractory lining of a blast furnace, 1539
Development and verification of a computer model for thermal distortions in hard turning, 1821
The aspects of stability in cross-wedge rolling processes of hollowed shafts, 1867
FEM analysis
The prediction of seam welds quality in aluminum extrusion, 366
FEM simulation
Optimisation of magnesium alloy stamping with local heating and cooling using the finite element method, 319
Design improvement of spin forming of magnesium alloy tubes using finite element, 816
A study on the development of center carrier type progressive die for U-bending part process, 1005
A novel and simple method for the measurement of plane strain work hardening, 1616
Ferrites
Study on the properties of the copper substituted NiZn ferrites, 797
Fiber reinforced composites
Guidelines for the preparation of design concept of biomimetic composites, 1590
Fiber reinforced plastics (FRPs)
Drilling fiber reinforced plastics (FRPs) manufactured by hand lay-up: influence of matrix (Viapal VUP 9731 and ATLAC 382-05), 1828
Fiber/matrix interface
A finite element analysis study of micromechanical interfacial characteristics of metal matrix composites, 992
Fibre arrays
Multi-beam fibre-optic laser scanning system for surface defect recognition, 2065
Fibre-reinforced
Composite rapid prototyping: overcoming the drawback of poor mechanical properties, 526

Filament winding process
Expert system for process planning of pressure vessel fabrication by deep drawing and ironing, 1465
Fillers
Development of polymer–ceramic composites for improved fire resistance, 401
Fine tube
Mandrel drawing and plug drawing of shape-memory-alloy fine tubes used in catheters and stents, 145
Finish machining
Stability criteria and break out of grains of super-hard of grinding tools, 2007
Finisher die
A new CAD system for finisher die design of an axisymmetric forging component with arbitrary profile, 157
Finite element
Incremental forming of solid cylindrical components using flow forming principles, 60
3D modelling of multipass welding of a 316L stainless steel pipe, 457
Dieless wire drawing—an experimental and numerical analysis, 1178
Finite element analysis (FEA)
Coupled temperature–displacement modelling of injection stretch-blow moulding of PET bottles using Buckley model, 20
Modelling and simulation environment for machining of low-rigidity components, 67
Finite element analysis of ultrasonically assisted turning of Inconel 718, 233
Evolution of void growth around cylindrical inclusions using the VOF technique, 608
Finite element analysis of the residual stress by cold expansion method under the influence of adjacent holes, 986
A finite element analysis study of micromechanical interfacial characteristics of metal matrix composites, 992
A FEM study on mechanisms of discontinuous chip formation in hard machining, 1350
Numerical/experimental analysis of the sheet hydro forming process using cylindrical, square and compound shaped cavities, 1435
Stamping of automotive components: a numerical and experimental investigation, 1489
Investigation of residual stress and post weld heat treatment of multi-pass welds by finite element method and experiments, 1690
Finite element method
Development of a novel method of tube bending using finite element simulation, 128
Numerical simulations of hot die forging processes using finite element method, 352
Comparison stamping and hydro-mechanical forming process for an automobile fuel tank using finite element method, 550
Finite grain-element analysis and its experimental confirmation of micro-yoke forming, 558
Head forging aspects of new forming process of screw spike, 736
Two-dimensional thermomechanical analysis of continuous casting process, 578
Process design and blank modification in the multistage rectangular deep drawing of an extreme aspect ratio, 778
The significance of weld imperfections and surface peening on fatigue crack propagation life of butt-welded joints, 931
Analysis of void growth in superplastic materials, 1273
Injection moulding of automotive components: comparison between hot runner systems for a case study, 1497
Investigation on blanking of thin sheet metal using the ductile fracture criterion and its experimental verification, 1935
Finite element modelling
Influence of the plasticity model in sheet metal forming simulations, 1596
A benchmark for validation of numerical results in sheet metal forming, 1980
Finite element simulation
Modelling and analysis of a deep-drawing operation: key factors for successful comparisons between experimental and simulated results, 1105
Finite elements
Heat transfer in semi-transparent materials during laser interaction, 1805
Finite plasticity
A constitutive model for finite deformation of endochronic plasticity in powder forming processes, 12
Finite strain plasticity
Numerical simulation of springback using enhanced assumed strain elements, 314
Finite volume method
Head forging aspects of new forming process of screw spike, 736
Finite-element method
Simulation of metal forming during multi-pass rolling of shape bars, 108
Fire resistance
Development of polymer–ceramic composites for improved fire resistance, 401
Flexible part
Modelling and simulation environment for machining of low-rigidity components, 67
Floor coverings
Impact properties of floor coverings and their role during simulated hip fractures, 139
Flow behavior
Effects of pre-treatment conditions on warm hydroformability of 7075 aluminum tubes, 1337
Flow forming
Incremental forming of solid cylindrical components using flow forming principles, 60
Flow modelling
The cooling process in gas quenching, 1881
Flow stress
Determination of work material flow stress and friction for FEA of machining using orthogonal cutting tests, 1019
Fluid flow
A comparison between different numerical formulations for welding arc representations, 1634
Flux cored arc welding
Eliminating post-weld heat treatment in repair welding by temper bead technique: role bead sequence in metallurgical changes, 392
FMEA
Failure modes and effects analysis through knowledge modelling, 253
Foam
A coupled temperature–displacement model for predicting the long-term performance of offshore pipeline insulation systems, 1242
Foam forming processes
Induced anisotropy in foams forming processes: modelling and simulation, 1482
Foils
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Force model
A flexible force model for end milling of low-rigidity parts, 134
Formability
Effect of heat treatment on the tensile properties of Al–Li alloys, 603

Improvement of formability from room temperature to warm temperature in AZ-31 magnesium alloy, 1313
Forming
Improved prediction of springback on final formed components, 464
Forming limit
Numerical and experimental investigations of forming limit diagrams in metal sheets, 424
Foundry tools
Rapid tooling of die DMLS inserts for shoot-squeeze moulding (DISA) system, 1111
Manufacturing core-boxes for foundry with rapid tooling technology, 1118
Fourier thermal analysis
Fourier thermal analysis of the solidification kinetics in A356/$SiC_p$ cast composites, 531
Fractal dimension
Optimizing drilling conditions in printed circuit board by considering hole quality. Optimization from viewpoint of drill-movement time, 1544
Fracture
Influence of filler particles on deformation and fracture mechanism of isotactic polypropylene, 1459
Stability criteria and break out of grains of super-hard of grinding tools, 2007
Fracture criterion
Investigation on blanking of thin sheet metal using the ductile fracture criterion and its experimental verification, 1935
Fracture machining
Machining a smooth surface of ceramic material by laser fracture machining technique, 1797
Fracture toughness
Investigating the mechanisms that cause quench cracking in aluminium alloy 7010, 330
Fracture resistance behavior of alumina–zirconia composites, 868
Friction
Friction modelling for the physical simulation of the bulk metal forming processes, 151
Lubricant flow between rough surfaces during closed-die forming, 707
A finite element analysis study of micromechanical interfacial characteristics of metal matrix composites, 992
Determination of work material flow stress and friction for FEA of machining using orthogonal cutting tests, 1019
Energetic analysis of the drawing process by upper-bound techniques, 1220
Experimental investigation of friction phenomena on the roll–material contact surface, 1519
Friction material
Physical and chemical characteristics of commercially available brake shoe lining materials: a comparative study, 1422
Friction properties
Surface modification of tool steel by $MOS_2$ powder shooting, 170
Friction welding
Simulation of friction welding using a developed computer program, 1011
FRP
Life prediction under sulfuric acid environment of FRP using X-ray analysis microscope, 1558
FSMA
Preparation and characterization of ferromagnetic shape memory alloys, 965
Fuel tank
Comparison stamping and hydro-mechanical forming process for an automobile fuel tank using finite element method, 550
Furnace
Computer simulation of the thermal regime of double-loop channel induction furnaces, 386
Computer simulation of the thermal regime of double-loop channel induction furnaces, 2093
Furnace design
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Fuzzy model
Strategy for generalizing the development of alloy steel fuzzy model for machinability data selection, 2080
Fuzzy pattern matching
Construction of PC-based expert system for cold forging process design, 1583
Fuzzy rules
Strategy for generalizing the development of alloy steel fuzzy model for machinability data selection, 2080
FVM
New method of thread rolling, 722

Galvanized steel
On the resistance spot weldability of galvanized interstitial free steel sheets with austenitic stainless steel sheets, 1
Gas quenching
The cooling process in gas quenching, 1881
Gas tungsten arc welding
A comparison between different numerical formulations for welding arc representations, 1634
Gas-assisted injection molding (GAIM)
A new process of gas-assisted injection molding for faster cooling, 1201
Genetic algorithm
A study on genetic algorithm to select architecture of a optimal neural network in the hot rolling process, 643
Design of ANFIS networks using hybrid genetic and SVD methods for the modelling of explosive cutting process, 1415
A model of simulation environment for prediction and optimisation of production processes, 1641
Genetic programming
Evolutionary approach for cutting forces prediction in milling, 1647
Geometrical accuracy
Influence of some relevant process parameters on the dimensional accuracy in incremental forming: a numerical and experimental investigation, 501
Geometry
Effects of varying slotted tube (stent) geometry on its expansion behaviour using finite element method, 1764
Glass
Processing of novel glass matrix composites by microwave heating, 1749
Glass temperature
The nature of the amorphous phase in resultant engineering products, 1428
Glass transition temperature
Experimental studies on comparison of microwave curing and thermal curing of epoxy resins used for alternative mould materials, 1532
GMAW
Effects of temperature and shielding gas mixture on fatigue life of 5083 aluminum alloy, 1408
Grain boundary element
Finite grain-element analysis and its experimental confirmation of micro-yoke forming, 558
Grain element
Finite grain-element analysis and its experimental confirmation of micro-yoke forming, 558
Grey cast iron
Analysis of the influence of chemical composition on the mechanical and metallurgical properties of engine cylinder blocks in grey cast iron, 1039

Grey relational analysis
Optimization by Grey relational analysis of EDM parameters on machining Al–10%$SiC_P$ composites, 1658
Grinding
Integrity of ground cylindrical surface, 714
Grinding characteristics of conventional and ELID methods in difficult-to-cut and hardened brittle materials, 1196
Stability criteria and break out of grains of super-hard of grinding tools, 2007
GTD-111 superalloy
Tensile deformation mechanisms at different temperatures in the Ni-base superalloy GTD-111, 1900

HANARO reactor
Residual stress measurement on welded specimen by neutron diffraction, 1171
Hard machining
A FEM study on mechanisms of discontinuous chip formation in hard machining, 1350
Hard turning
Identification of cutting errors in precision hard turning process, 746
Development and verification of a computer model for thermal distortions in hard turning, 1821
Hardened AISI H13 tool steel
Performance of P10 TiN coated carbide tools when end milling AISI H13 tool steel at high cutting speed, 1062
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
Hardened brittle material
Grinding characteristics of conventional and ELID methods in difficult-to-cut and hardened brittle materials, 1196
Heat affected zone
Application of impact tensile testing to spot welded sheets, 80
Heat cyclic treatment
An analysis of combined cyclic heat treatment performance, 1704
Heat transfer
Resistance spot welding simulation: a general finite element formulation of electrothermal contact conditions, 436
Computer simulation of the thermal behaviour of a work roll during hot rolling of steel strip, 894
Inverse determination of boundary conditions during boiling water heat transfer in quenching operation, 1324
A comparison between different numerical formulations for welding arc representations, 1634
Advanced simulations for hot forging: heat transfer model for use with the finite element method, 1912
Heat treatment
Distortions induced by heat treatment of automotive bevel gears, 476
Effect of heat treatment on the tensile properties of Al–Li alloys, 603
The application of advances in quench factor analysis property prediction to the heat treatment of 7010 aluminium alloy, 674
Tribological (wear) properties of aluminum–silicon eutectic base alloy under dry sliding condition, 833
Effects of pre-treatment conditions on warm hydroformability of 7075 aluminum tubes, 1337
Precipitation of carbides and sigma phase in AISI type 446 stainless steel under working conditions, 1681
The cooling process in gas quenching, 1881
Effects of molybdenum and nickel additions on the structure and properties of carburized and hardened low carbon steels, 1972
Heat-affected zone
Eliminating post-weld heat treatment in repair welding by temper bead technique: role bead sequence in metallurgical changes, 392
Heating
Jet impingement onto a conical hole in relation to laser machining, 2039
Helix angle
Cutting dynamic force modelling of endmilling operation, 1383
Hexagonal distortion
Long-term ageing behaviour of martensite in shape memory Cu–Al–Ni alloys, 164
High cutting speed
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
High power diode laser
A review of the use of high power diode lasers in surface hardening, 1855
Application of high power diode laser (HPDL) for alloying of X40CrMoV5-1 steel surface layer by tungsten carbides, 1956
High resolution powder diffraction (HRPD)
Residual stress measurement on welded specimen by neutron diffraction, 1171
High speed machining
Optimal machining parameters selection in high speed milling of hardened steels for injection moulds, 1505
High strength steel
Fracture toughness of welds—effect of brittle zones and strength mismatch, 537
High temperature hydrogen attack (HTHA)
Fracture mechanics evaluation of a 0.5Mo carbon steel subjected to high temperature hydrogen attack, 938
High-energy ball milling
The structure and magnetic properties of magnetically soft cobalt base nanocrystalline powders and nanocomposites with silicon binding, 1943
High-speed cutting
Performance of P10 TiN coated carbide tools when end milling AISI H13 tool steel at high cutting speed, 1062
High-speed grinding
Machining characteristics of mold material in high-speed grinding, 1189
Hi-speed punching
The development of hi-speed punching system using a couple of rotating bodies, 1157
Hollow extrusion
Analysis of P/M hollow extrusion using design of experiments, 416
Hollowed shaft
The aspects of stability in cross-wedge rolling processes of hollowed shafts, 1867
Hollow-sphere-composites (HSCs)
Lightweight, hollow-sphere-composite (HSC) materials for mechanical engineering applications, 1839
Honing
Stability criteria and break out of grains of super-hard of grinding tools, 2007
Hot blacksmith forging
Theoretical and experimental analysis of the effect of die shape on the internal quality of forged rods, 571
Hot compression
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Hot deformation
The influence of hot deformation on the exfoliation corrosion behaviour of aluminium alloy 2025, 185
Effect of the heat treatment on the hot deformation behaviour of AA6082 alloy, 881
Hot die forging
Numerical simulations of hot die forging processes using finite element method, 352

Hot extrusion
Mechanically milled AA6061/$(Ti_3Al)_p$ MMC reinforced with intermetallics – the structure and properties, 2002
Hot forging
Advanced simulations for hot forging: heat transfer model for use with the finite element method, 1912
Hot rolling
Modeling the thermal and thermoelastic responses of work rolls used for hot rolling steel strip, 886
High temperature oxide scale characteristics of low carbon steel in hot rolling, 1307
Hot rolling process
A study on genetic algorithm to select architecture of a optimal neural network in the hot rolling process, 643
Hot rolling steel
Computer simulation of the thermal behaviour of a work roll during hot rolling of steel strip, 894
Hot work steel
Improvement of wear resistance of hot work steels by PVD coatings deposition, 1995
Hot-work tool steel
Thermal fatigue testing of chromium martensitic hot-work tool steel after different austenitizing treatments, 1089
Application of high power diode laser (HPDL) for alloying of X40CrMoV5-1 steel surface layer by tungsten carbides, 1956
Hot-working tool
Thermal shock resistance of electroslag cast steel for hot-working tools, 2122
HSLA-80 and ULCB steels
Austenite transformation and age hardening of HSLA-80 and ULCB steels, 1513
Human factors
A human–computer system for collaborative design (HCSCD), 1964
HVCC coating
A comparison of elevated temperature erosion resistance of four new HVCC coatings with other wire sprayed coatings, 7
HVOF
HVOF coating of Inconel 625 onto stainless and carbon steel surfaces: corrosion and bond testing, 2051
Hydroforming
Numerical prediction of bursting failure in tube hydroforming by the FEM considering plastic anisotropy, 544
Hydro-mechanical forming
Comparison stamping and hydro-mechanical forming process for an automobile fuel tank using finite element method, 550
Hyperbolic sine equation
Representing the superplasticity of Inconel 718, 694

Image analysis
Image analysis automation of spheroidal cast iron, 853
Modelling and analysis of a deep-drawing operation: key factors for successful comparisons between experimental and simulated results, 1105
A non-contact technique for the on-site inspection of molds and dies polishing, 1184
Immersion angle
Cutting dynamic force modelling of endmilling operation, 1383
Impact
Deformation behavior of Inconel 690 super alloy evaluated by impact test, 219
The low velocity impact loading of $Al_2O_3$/SiC whisker reinforced ceramic composite, 1986
Impact forces
Impact properties of floor coverings and their role during simulated hip fractures, 139
Impact tensile testing
Application of impact tensile testing to spot welded sheets, 80
Impact testing
Effect of prestraining and strain-aging on toughness of MnMoNi steel weld metal, 1124
Implicit and explicit procedure
Numerical and experimental investigations of forming limit diagrams in metal sheets, 424
Inconel 690
Deformation behavior of Inconel 690 super alloy evaluated by impact test, 219
Inconel 718
Finite element analysis of ultrasonically assisted turning of Inconel 718, 233
Representing the superplasticity of Inconel 718, 694
Incremental forming
Influence of some relevant process parameters on the dimensional accuracy in incremental forming: a numerical and experimental investigation, 501
Design improvement of spin forming of magnesium alloy tubes using finite element, 816
Incremental in-plane bending
Influence of pitch and cross-sectional ratio of strip of sheet metal on incremental in-plane bending, 1810
Indentation strength
Fracture resistance behavior of alumina–zirconia composites, 868
Induced anisotropy
Induced anisotropy in foams forming processes: modelling and simulation, 1482
Induction
Computer simulation of the thermal regime of double-loop channel induction furnaces, 386
Computer simulation of the thermal regime of double-loop channel induction furnaces, 2093
Injection condition
Semi-solid die casting process with three steps die system, 442
Inkjet printing
Defects and prevention in ceramic components fabricated by inkjet printing, 1286
Insulation
A coupled temperature–displacement model for predicting the long-term performance of offshore pipeline insulation systems, 1242
Integration
Modelling and simulation environment for machining of low-rigidity components, 67
Integrity
Integrity of ground cylindrical surface, 714
Intelligent blank holding force control
Intelligent sheet stamping process using segment blankholder modules, 2099
Intelligent system
A study on an intelligent system to predict the tensile stress in welding using solar energy concentration, 649
Intercritical heat treatment
The effect of intercritical heat treatment on the mechanical properties of AISI 3115 steel, 482
Interfacial-strength
Role of segregation and precipitates on interfacial strengthening mechanisms in SiC reinforced aluminium alloy when subjected to thermomechanical processing, 758
Interim check
Quick check error verification of coordinate measuring machines, 1207
Intermetallics
Investigation of Sn–Pb solder bumps of prototype photo detectors for the LHCb experiment, 1668

Mechanically milled AA6061/$(Ti_3Al)_p$ MMC reinforced with intermetallics – the structure and properties, 2002
Internal pressure
Effect of material internal pressure in curing process of SMC roll forming, 1577
Inverse method
Analysis of an inverse method of simultaneous determination of thermal conductivity and heat of phase transformation in steels, 1317
Inverse solution
Inverse determination of boundary conditions during boiling water heat transfer in quenching operation, 1324
Inverted rod
Direct and inverted open die extrusion (ODE) of rods and tubes, 765

Jet
Jet impingement onto a conical hole in relation to laser machining, 2039
Jet characteristics
A study of abrasive waterjet characteristics by CFD simulation, 488

K8 optical glass
Laser removal of micron contaminant colloidal refractory and poor laser absorption particles from super-smooth optical substrate, 1074
KBS
Material selection in the design of electrical connectors, 213
Knowledge base system framework
A low cost knowledge base system framework for progressive die design, 958
Knowledge representation
Failure modes and effects analysis through knowledge modelling, 253
Knowledge-based modeling
Knowledge-based process selection for rotationally symmetric and rotationally non-symmetric components in cold forming, 338

Laser
Heat transfer in semi-transparent materials during laser interaction, 1805
Jet impingement onto a conical hole in relation to laser machining, 2039
Laser heating of sheet metal and thermal stress development, 2045
Laser cutting quality assessment and thermal efficiency analysis, 2106
Laser cladding
Computational mechanics of laser cladding process, 494
Numerical finite element investigation on laser cladding treatment of ring geometries, 1443
Laser cleaning
Laser removal of micron contaminant colloidal refractory and poor laser absorption particles from super-smooth optical substrate, 1074
Laser hardening
A review of the use of high power diode lasers in surface hardening, 1855
Behaviour of 12% Ni steel with the change of initial precipitates, 2019
Laser machining
Machining a smooth surface of ceramic material by laser fracture machining technique, 1797
Laser machining in die making—a modern rapid tooling process, 1815
Laser scanning
Multi-beam fibre-optic laser scanning system for surface defect recognition, 2065
Laser welding
A semi-empirical model of the temperature field in the AISI 304 laser welding, 1235
Laser-drilled nozzle
Effects of process variables on the multi-strand casting of high strength sub-millimetre metallic glass wire, 1344
LaserForm$^{TM}$
A note on rapid metal composite tooling by selective laser sintering, 28
Latent heat
Computational mechanics of laser cladding process, 494
Latent heat of phase transformation
Analysis of an inverse method of simultaneous determination of thermal conductivity and heat of phase transformation in steels, 1317
Lathe turning
Machining characteristics of electroslag cast steel for hot-working tools, 654
Layered structures
Long-term ageing behaviour of martensite in shape memory Cu–Al–Ni alloys, 164
Leak tightness test
On line leak testing of welded water heaters, 1164
Lightweight construction
Manufacturing of composite workpieces with rolling tools, 323
Lightweight materials
Lightweight, hollow-sphere-composite (HSC) materials for mechanical engineering applications, 1839
Loading
Analysis of the elastic characteristics at die and workpiece to improve the dimensional accuracy for cold forged part, 1081
Loading conditions
Investigation of wear properties of magnesium and aluminum alloys for automotive applications, 1526
Lockin thermography
The use of infrared thermography for materials characterization, 1132
Analysis of stainless steel welded joints: a comparison between destructive and non-destructive techniques, 1893
Low cycle fatigue
Numerical determination of carrying capacity of large rolling bearings, 1696
Low SFE
Anomalous plastic behavior of fine-grained MP35N alloy during room temperature tensile testing, 1905
Low-carbon steel
Oxide scales growth of low-carbon steel at high temperatures, 1300
Low-velocity
The low velocity impact loading of $Al_2O_3$/SiC whisker reinforced ceramic composite, 1986

M–A constituents
Mechanical and metallurgical investigation of martensite–austenite constituents in simulated welding conditions, 87
Machinability
Machining characteristics of electroslag cast steel for hot-working tools, 654
Machining characteristics of novel-abrasion resistant iron, 751
Modelling of machinability parameters of carbon–carbon composite—a response surface approach, 920
Machinability data selection
Strategy for generalizing the development of alloy steel fuzzy model for machinability data selection, 2080
Machine deflection
Incremental forming of solid cylindrical components using flow forming principles, 60

Machine learning
Development of machine learning strategy for acquiring on-line machining skills during turning process, 2087
Machining
A flexible force model for end milling of low-rigidity parts, 134
Tool cutting force modeling in ball-end milling using multilevel perceptron, 268
Machining data selection
Development of machine learning strategy for acquiring on-line machining skills during turning process, 2087
Machining parameters
Laser machining in die making—a modern rapid tooling process, 1815
MAG welding
On line leak testing of welded water heaters, 1164
Magnesium alloy sheet
Optimisation of magnesium alloy stamping with local heating and cooling using the finite element method, 319
Improvement of formability from room temperature to warm temperature in AZ-31 magnesium alloy, 1313
Magnesium alloy tube
Design improvement of spin forming of magnesium alloy tubes using finite element, 816
Magnesium alloys
Investigation of wear properties of magnesium and aluminum alloys for automotive applications, 1526
Semi-solid manufacturing process of magnesium alloys by twin-roll casting, 1662
Magnetic materials
Simulation of the magnetic properties for common rail electro-injector, 1611
Magnetic modelling
Magnetic modelling at nanoscale level, 785
Magnetic nanostructures
Characterisation of electrodeposited nickel nanowires using NCA template, 811
Magnetic properties
Processing of high-performance anisotropic permanent magnets by die-upset forging, 508
Study on the properties of the copper substituted NiZn ferrites, 797
The structure and magnetic properties of magnetically soft cobalt base nanocrystalline powders and nanocomposites with silicon binding, 1943
Magnetic recording
Magnetic modelling at nanoscale level, 785
Magnetic shape memory
Characterization of NiMnGa magnetic shape memory alloys, 1266
Magneto-impedance
Magneto-impedance effect in Co-based metallic glass ribbons, 791
Maintenance management
Implementation and benefits of introducing a computerised maintenance management system into a textile manufacturing company, 226
Management
A human–computer system for collaborative design (HCSCD), 1964
Mandrel drawing
Mandrel drawing and plug drawing of shape-memory-alloy fine tubes used in catheters and stents, 145
Manufacturing
Implementation and benefits of introducing a computerised maintenance management system into a textile manufacturing company, 226
Maraging steel
Behaviour of 12% Ni steel with the change of initial precipitates, 2019
MARC K7.1-3D FEA
Numerical and experimental investigations of forming limit diagrams in metal sheets, 424
Martensite
Long-term ageing behaviour of martensite in shape memory Cu–Al–Ni alloys, 164
Effects of molybdenum and nickel additions on the structure and properties of carburized and hardened low carbon steels, 1972
Martensitic transformation
Characterization of NiMnGa magnetic shape memory alloys, 1266
Material characterization
The use of infrared thermography for materials characterization, 1132
Material coating
2.45 GHz microwave plasma system for high-velocity thermal spraying, 294
Material properties
Web-based material properties for use with metalforming simulation packages, 688
Material selection
Material selection in the design of electrical connectors, 213
Materials processing
Finite element modelling of an Al–Mn alloy by equal channel angular extrusion (ECAE), 846
A method for continuous processing of materials by ECAP processes, 2126
Mathematical modelling
A comparison between different numerical formulations for welding arc representations, 1634
Mean particle size
Powder metallurgy processing of ruthenium aluminum alloys, 952
Measurement
Cutting sharpness measurement: a critical review, 261
Experimental investigation of friction phenomena on the roll–material contact surface, 1519
Mechanical alloying
Powder metallurgy processing of ruthenium aluminum alloys, 952
Mechanical engineering
Lightweight, hollow-sphere-composite (HSC) materials for mechanical engineering applications, 1839
Mechanical milling
Mechanically milled AA6061/$(Ti_3Al)_p$ MMC reinforced with intermetallics – the structure and properties, 2002
Mechanical properties
Effect of copper and solidification conditions on the microstructure and mechanical properties of Al–Si–Mg alloys, 193
The role of austempering parameters on the structure and mechanical properties of heavy section ADI, 203
Semi-solid die casting process with three steps die system, 442
Composite rapid prototyping: overcoming the drawback of poor mechanical properties, 526
Thermal stability and mechanical properties of Al-based amorphous alloys, 829
Effect of precipitation during quenching on the mechanical properties of the aluminium alloy 7010 in the W-temper, 998
Analysis of the influence of chemical composition on the mechanical and metallurgical properties of engine cylinder blocks in grey cast iron, 1039
The effect of cyclic strain path on the properties and structure of CuAl10 aluminium bronze, 1138
The effect of complex strain path on the properties of CuSi5 silicon bronze, 1144
Investigation of Sn–Pb solder bumps of prototype photo detectors for the LHCb experiment, 1668
Lightweight, hollow-sphere-composite (HSC) materials for mechanical engineering applications, 1839

Mechanochemical processing
The mechanochemical processing of aerospace metals, 472
Medium carbon steel
Simulation of friction welding using a developed computer program, 1011
Medium-carbon low-alloy steel
Effect of microstructure and hardness on the machinability of medium-carbon chrome-molybdenum steel, 48
MEMS
Atomic force microscopy-based nano-lithography for nano-patterning: a molecular dynamic study, 1847
MES
Theoretical and experimental analysis of the effect of die shape on the internal quality of forged rods, 571
Metal extrusion
A new definition of shape complexity for metal extrusion, 1734
Metal forming
Finite element modelling of an Al–Mn alloy by equal channel angular extrusion (ECAE), 846
A method for continuous processing of materials by ECAP processes, 2126
Metal matrix composites
Fourier thermal analysis of the solidification kinetics in A356/$SiC_p$ cast composites, 531
A finite element analysis study of micromechanical interfacial characteristics of metal matrix composites, 992
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Metal turning
The impact of cutting conditions on cutting forces and vibration signals in turning with plane face geometry inserts, 1708
Metalforming
Web-based material properties for use with metalforming simulation packages, 688
Metalic glasses
Magneto-impedance effect in Co-based metallic glass ribbons, 791
The structure and magnetic properties of magnetically soft cobalt base nanocrystalline powders and nanocomposites with silicon binding, 1943
Metallic surface inspection
A non-contact technique for the on-site inspection of molds and dies polishing, 1184
Micro Raman
Characterization of DLC coatings deposited by rf magnetron sputtering, 804
Micro-alloyed steel
Modeling of steel microstructure evolution during thermo-mechanical rolling of plate for conveying pipes, 432
Microfinishing
Stability criteria and break out of grains of super-hard of grinding tools, 2007
Micron contaminants
Laser removal of micron contaminant colloidal refractory and poor laser absorption particles from super-smooth optical substrate, 1074
Microstrain
Powder metallurgy processing of ruthenium aluminum alloys, 952
Microstructural changes
Characterisation of microstructural evolutions in refractory castables by in situ high temperature ESEM, 1474
Microstructure
Effect of microstructure and hardness on the machinability of medium-carbon chrome-molybdenum steel, 48
Effect of copper and solidification conditions on the microstructure and mechanical properties of Al–Si–Mg alloys, 193
Deformation behavior of Inconel 690 super alloy evaluated by impact test, 219
Development of polymer–ceramic composites for improved fire resistance, 401
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Numerical visualization of viscosity in phase transformation forming process with controlled liquid fraction, 450
Distortions induced by heat treatment of automotive bevel gears, 476
Microstructure and properties of the new Pt–Rh based alloys for high-temperature applications, 681
Preparation and characterization of ferromagnetic shape memory alloys, 965
Fabrication of a polymer microstructure by a modified DXRL process, 1097
Microstructural evolution of Al–Zn–Mg–Cu–(Sc) alloy during hot extrusion and heat treatments, 1330
Effects of casting temperature on the microstructure and wear resistance of compocast A356/$SiC_p$ composites: a comparison between SS and SL routes, 1874
Behaviour of 12% Ni steel with the change of initial precipitates, 2019
Microwave
An atmospheric microwave plasma jet for ceramic material processing, 288
Microwave heating
Experimental studies on comparison of microwave curing and thermal curing of epoxy resins used for alternative mould materials, 1532
Microwave plasma
2.45 GHz microwave plasma system for high-velocity thermal spraying, 294
Microwave processing
Processing of novel glass matrix composites by microwave heating, 1749
Micro-yoke
Finite grain-element analysis and its experimental confirmation of micro-yoke forming, 558
Milling cutting forces prediction
Evolutionary approach for cutting forces prediction in milling, 1647
Mines
Development of shape memory actuated ITU Robot Hand and its mine clearance compatibility, 1390
Miniaturization
Finite grain-element analysis and its experimental confirmation of micro-yoke forming, 558
Miniaturized machine tool
Fabrication of a V-groove on the optical fiber connector using a miniaturized machine tool, 1716
Mismatch
Fracture toughness of welds—effect of brittle zones and strength mismatch, 537
Mixed lubrication
Efficient algorithmic approach for mixed-lubrication in cold rolling, 307
Mixes
FEM simulation of the thermomechanical behaviour of the refractory lining of a blast furnace, 1539
Mixing shield gas ratio
Effects of temperature and shielding gas mixture on fatigue life of 5083 aluminum alloy, 1408
MMC
Role of segregation and precipitates on interfacial strengthening mechanisms in SiC reinforced aluminium alloy when subjected to thermomechanical processing, 758
Electric discharge machining of Al–SiC metal matrix composites using rotary tube electrode, 978

MMCs
Mechanically milled AA6061/$(Ti_3Al)_P$ MMC reinforced with intermetallics – the structure and properties, 2002
0.5Mo carbon steel
Fracture mechanics evaluation of a 0.5Mo carbon steel subjected to high temperature hydrogen attack, 938
Modeling
Tool cutting force modeling in ball-end milling using multilevel perceptron, 268
Estimate of consumed energy at backward extrusion process by means of modelling approach, 907
Engineering of surface layer in material removal machining, 1451
Modelling and experimental investigation of solidification process in sand casting, 1723
Application of neural networks for prediction of critical values of temperatures and time of the supercooled austenite transformations, 1950
Modelling and simulation
Generic tool for modelling and simulation of semiconductor intrabay material handling system, 1927
Modelling material
Study on ring compression test using physical modelling and FE simulation, 54
Modified DXRL
Fabrication of a polymer microstructure by a modified DXRL process, 1097
Modular tooling
A note on rapid metal composite tooling by selective laser sintering, 28
Moisture
The effect of surface pretreatment and moisture on the fatigue performance of adhesively-bonded aluminium, 359
Molds and dies polishing
A non-contact technique for the on-site inspection of molds and dies polishing, 1184
Molecular dynamics simulation
A model of the trapping media in *micro*FLASH® memory cells, 179
Atomic force microscopy-based nano-lithography for nano-patterning: a molecular dynamic study, 1847
Monitoring
Identification of cutting errors in precision hard turning process, 746
Monte Carlo
Monte Carlo simulation of the effective thermal conductivity in two-phase material, 741
$MoS_2$
Surface modification of tool steel by $MOS_2$ powder shooting, 170
Mould and die manufacturing
Optimal machining parameters selection in high speed milling of hardened steels for injection moulds, 1505
Mould making
Laser machining in die making—a modern rapid tooling process, 1815
Mould materials
Experimental studies on comparison of microwave curing and thermal curing of epoxy resins used for alternative mould materials, 1532
Moving heating source
Laser heating of sheet metal and thermal stress development, 2045
MP35N
Anomalous plastic behavior of fine-grained MP35N alloy during room temperature tensile testing, 1905
MSM effect
Characterization of NiMnGa magnetic shape memory alloys, 1266
Multi-parameter analysis
Modeling of surface finish in electro-discharge machining based upon statistical multi-parameter analysis, 1247
Multipass
3D modelling of multipass welding of a 316L stainless steel pipe, 457
Multi-pass rolling
Simulation of metal forming during multi-pass rolling of shape bars, 108
Multipass welding
Mechanical and metallurgical investigation of martensite–austenite constituents in simulated welding conditions, 87
Multiphase axisymmetric flow
A study of abrasive waterjet characteristics by CFD simulation, 488
Multiple regression analysis
A study on an intelligent system to predict the tensile stress in welding using solar energy concentration, 649
Multiscale approach
Induced anisotropy in foams forming processes: modelling and simulation, 1482
Multistage rectangular deep drawing process
Process design and blank modification in the multistage rectangular deep drawing of an extreme aspect ratio, 778
Multi-strand casting
Effects of process variables on the multi-strand casting of high strength sub-millimetre metallic glass wire, 1344

Nanochannel alumina
Characterisation of electrodeposited nickel nanowires using NCA template, 811
Nanocrystallization
The structure and magnetic properties of magnetically soft cobalt base nanocrystalline powders and nanocomposites with silicon binding, 1943
Nanograins
The mechanochemical processing of aerospace metals, 472
Nanoindentation
Characterization of DLC coatings deposited by rf magnetron sputtering, 804
Nano-lithography
Atomic force microscopy-based nano-lithography for nano-patterning: a molecular dynamic study, 1847
Nanomagnetic structures
Magnetic modelling at nanoscale level, 785
Nano-porous particle
Study on mechanism of mechanical damping system based on the colloidal suspension of nano-porous particles, 565
N-AR iron
Machining characteristics of novel-abrasion resistant iron, 751
Natural mode
Natural mode estimation of cutting dynamics with time series modelling, 1373
Nd–Fe–B magnets
Processing of high-performance anisotropic permanent magnets by die-upset forging, 508
Network analysis
Modelling and experimental investigation of solidification process in sand casting, 1723
Neural network
Tool cutting force modeling in ball-end milling using multilevel perceptron, 268
A study on genetic algorithm to select architecture of a optimal neural network in the hot rolling process, 643
Application of neural networks for prediction of critical values of temperatures and time of the supercooled austenite transformations, 1950
Development of machine learning strategy for acquiring on-line machining skills during turning process, 2087
Neutron diffraction measurement
Residual stress measurement on welded specimen by neutron diffraction, 1171

Ni-base superalloys
Effects of casting process variables on the residual stress in Ni-base superalloys, 209
Nickel
Preparation of nickel and copper submicrometer particles by pyrolysis of their formates, 1058
Nickel nanowires
Characterisation of electrodeposited nickel nanowires using NCA template, 811
Ni–Co–Mo alloys
Submerged arc surfacing of Ni–Co–Mo alloys similar to maraging steels on a structural steel, 2011
Ni–Mn–Ga
Preparation and characterization of ferromagnetic shape memory alloys, 965
NiMnGa
Characterization of NiMnGa magnetic shape memory alloys, 1266
Ni–Ti alloy
Development of shape memory actuated ITU Robot Hand and its mine clearance compatibility, 1390
NiTi coating
Drilling of conventional cast stainless steel with HIPed NiTi coating, 622
Nitriding
The effect of coating and nitriding on the wear behaviour of tool steels, 1918
NiZn ferrites
Study on the properties of the copper substituted NiZn ferrites, 797
Nodular cast iron
Image analysis automation of spheroidal cast iron, 853
Nomograms
Estimation of extrusion stress for sintered P/M preforms-nomogram approach, 420
Non-destructive evaluation
The use of infrared thermography for materials characterization, 1132
Non-linear material laws
FEM simulation of the thermomechanical behaviour of the refractory lining of a blast furnace, 1539
Non-linear parametric vibration
Interdependence between the rolling speed and non-linear vibrations of the mill system, 2116
Nose wear
Effect of high-pressure coolant supply when machining nickel-base, Inconel 718, alloy with coated carbide tools, 1045
Numerical algorithm
Improved prediction of springback on final formed components, 464
Numerical analysis
Static load dispersion analysis of solid–air composites. Effect of adhesive film on the load dispersion, .1551
Numerical modelling
Induced anisotropy in foams forming processes: modelling and simulation, 1482
Numerical simulation
Numerical simulations of hot die forging processes using finite element method, 352
Numerical and experimental investigations of forming limit diagrams in metal sheets, 424
Experimental and numerical investigation of the weld repair of superplastic forming dies, 1673

Objective function
Theoretical and experimental analysis of the effect of die shape on the internal quality of forged rods, 571
Object-oriented modelling
Modelling and simulation environment for machining of low-rigidity components, 67
On-machine measurement (OMM)
Reduction of machining errors of a three-axis machine tool by on-machine measurement and error compensation system, 2056
Open die
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
Optimization
Optimizing drilling conditions in printed circuit board by considering hole quality. Optimization from viewpoint of drill-movement time, 1544
Optimization by Grey relational analysis of EDM parameters on machining Al–10%$SiC_P$ composites, 1658
Orthogonal cutting
Determination of work material flow stress and friction for FEA of machining using orthogonal cutting tests, 1019
Ostwald–de Waele rheology model
Numerical visualization of viscosity in phase transformation forming process with controlled liquid fraction, 450
Overflow buffer
A new process of gas-assisted injection molding for faster cooling, 1201
Overloading
The effect of single and multiple overloads on the fatigue crack growth of high strength titanium aluminides, 615
Overloads
Experimental study on the influence of overload induced residual stress field on fatigue crack growth in aluminium alloy, 945
Oxide scale
Oxide scales growth of low-carbon steel at high temperatures, 1300
High temperature oxide scale characteristics of low carbon steel in hot rolling, 1307
Oxides
Prediction of high temperature demixing in oxides in an electric field or an oxygen potential gradient, 771

Pad surface features
Polishing pad surface characterisation in chemical mechanical planarisation, 666
Padless polishing
Development of a padless ultraprecision polishing method using electrorheological fluid, 1293
PALS
The nature of the amorphous phase in resultant engineering products, 1428
Particle distribution
Effects of casting temperature on the microstructure and wear resistance of compocast A356/$SiC_p$ composites: a comparison between SS and SL routes, 1874
Patterned media
Magnetic modelling at nanoscale level, 785
PCBN
Identification of cutting errors in precision hard turning process, 746
PET bottles
Coupled temperature–displacement modelling of injection stretch-blow moulding of PET bottles using Buckley model, 20
Phenolic resin
Physical and chemical characteristics of commercially available brake shoe lining materials: a comparative study, 1422
Photolithography process
A simulation model to characterize photolithography process of a semiconductor wafer fabrication, 2071
Physical modelling and finite element
Study on ring compression test using physical modelling and FE simulation, 54
Physical properties
Physical and chemical characteristics of commercially available brake shoe lining materials: a comparative study, 1422

Physical simulation
Friction modelling for the physical simulation of the bulk metal forming processes, 151
Pin-on-disk
Tribological (wear) properties of aluminum–silicon eutectic base alloy under dry sliding condition, 833
Pin-on-disk test
Improvement of wear resistance of hot work steels by PVD coatings deposition, 1995
Pipeline
A coupled temperature–displacement model for predicting the long-term performance of offshore pipeline insulation systems, 1242
Pitch
Influence of pitch and cross-sectional ratio of strip of sheet metal on incremental in-plane bending, 1810
Plane strain
Energetic analysis of the drawing process by upper-bound techniques, 1220
A novel and simple method for the measurement of plane strain work hardening, 1616
Planning of experiments
Tool wear prediction in turning, 276
Plasma
An atmospheric microwave plasma jet for ceramic material processing, 288
Plastic anisotropy
Numerical prediction of bursting failure in tube hydroforming by the FEM considering plastic anisotropy, 544
Plastic deformation
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Plastic instability
Numerical prediction of bursting failure in tube hydroforming by the FEM considering plastic anisotropy, 544
Platinum alloys
Microstructure and properties of the new Pt–Rh based alloys for high-temperature applications, 681
Platinum aluminide
Microstructural instability in coated single crystal superalloys, 660
Polishing pad conditioning
Polishing pad surface characterisation in chemical mechanical planarisation, 666
Polycrystalline
Preparation and characterization of ferromagnetic shape memory alloys, 965
Polymer
Heat transfer in semi-transparent materials during laser interaction, 1805
Polyolefines
The nature of the amorphous phase in resultant engineering products, 1428
Polypropylene
Ageing time of wettability on polypropylene surfaces processed by cold plasma, 519
Influence of filler particles on deformation and fracture mechanism of isotactic polypropylene, 1459
Porosity
Processing of novel glass matrix composites by microwave heating, 1749
Effects of casting temperature on the microstructure and wear resistance of compocast A356/$SiC_p$ composites: a comparison between SS and SL routes, 1874
Post weld heat treatment
Eliminating post-weld heat treatment in repair welding by temper bead technique: role bead sequence in metallurgical changes, 392
Investigation of residual stress and post weld heat treatment of multi-pass welds by finite element method and experiments, 1690
Powder compaction
A constitutive model for finite deformation of endochronic plasticity in powder forming processes, 12
Powder metallurgy
Analysis of P/M hollow extrusion using design of experiments, 416
Estimation of extrusion stress for sintered P/M preforms-nomogram approach, 420
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Powder mixing
Evaluation of two-component powder mixing by vertical vibration. Investigation of powder behavior and mixed state by internal pressure fluctuation, 1571
Powder shooting
Surface modification of tool steel by $MOS_2$ powder shooting, 170
Power law
Effect of the heat treatment on the hot deformation behaviour of AA6082 alloy, 881
$\gamma'$ precipitates
Tensile deformation mechanisms at different temperatures in the Ni-base superalloy GTD-111, 1900
Precipitation
Role of segregation and precipitates on interfacial strengthening mechanisms in SiC reinforced aluminium alloy when subjected to thermomechanical processing, 758
Austenite transformation and age hardening of HSLA-80 and ULCB steels, 1513
Behaviour of 12% Ni steel with the change of initial precipitates, 2019
Precision
Optimal machining parameters selection in high speed milling of hardened steels for injection moulds, 1505
Press
Development of process design system for press forming—multi-objective optimization of intermediate die shape in transfer forming, 1564
Pressure fluctuation
Evaluation of two-component powder mixing by vertical vibration. Investigation of powder behavior and mixed state by internal pressure fluctuation, 1571
Pressure vessels for water heating
On line leak testing of welded water heaters, 1164
Printed circuit board
Optimizing drilling conditions in printed circuit board by considering hole quality. Optimization from viewpoint of drill-movement time, 1544
Probability distributions
A probabilistic study of failures of solid and hollow dies in hot aluminum extrusion, 1740
Process
Rejuvenation of an inconel alloy used in gas turbines, 2051
Process planning
A model of simulation environment for prediction and optimisation of production processes, 1641
Process selection
Knowledge-based process selection for rotationally symmetric and rotationally non-symmetric components in cold forming, 338
Product design
Evaluation of the aesthetics of products and integration of the findings in a proposed intelligent design system, 380
Progressive die design
A low cost knowledge base system framework for progressive die design, 958

Progressive wear
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
Properties
Microstructure and properties of the new Pt–Rh based alloys for high-temperature applications, 681
PVD coating
Determination of the optimum TiN coating thickness on WC inserts for machining carbon steels, 1861
Improvement of wear resistance of hot work steels by PVD coatings deposition, 1995

Quench chamber design
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Quench cracking
Investigating the mechanisms that cause quench cracking in aluminium alloy 7010, 330
Quench factor analysis
The application of advances in quench factor analysis property prediction to the heat treatment of 7010 aluminium alloy, 674
Quench factors
Residual stress reduction in 7175-T73, 6061-T6 and 2017A-T4 aluminium alloys using quench factor analysis, 346
Quenching operation
Inverse determination of boundary conditions during boiling water heat transfer in quenching operation, 1324

Radial return
Efficient algorithmic approach for mixed-lubrication in cold rolling, 307
Rapid prototyping
Rapid tooling of die DMLS inserts for shoot-squeeze moulding (DISA) system, 1111
Manufacturing core-boxes for foundry with rapid tooling technology, 1118
Rapid tooling
Rapid tooling of die DMLS inserts for shoot-squeeze moulding (DISA) system, 1111
Manufacturing core-boxes for foundry with rapid tooling technology, 1118
Laser machining in die making—a modern rapid tooling process, 1815
Rapidly solidified
Effects of process variables on the multi-strand casting of high strength sub-millimetre metallic glass wire, 1344
Reaction synthesis
Hot extrusion reaction synthesis of nickel, titanium and iron aluminides, 630
Recovery
Microstructural evolution of Al–Zn–Mg–Cu–(Sc) alloy during hot extrusion and heat treatments, 1330
Recrystallization
Microstructural evolution of Al–Zn–Mg–Cu–(Sc) alloy during hot extrusion and heat treatments, 1330
Rectangular hole
The development of hi-speed punching system using a couple of rotating bodies, 1157
Reference experimental results
A benchmark for validation of numerical results in sheet metal forming, 1980
Refractories
FEM simulation of the thermomechanical behaviour of the refractory lining of a blast furnace, 1539
Refractory castables
Characterisation of microstructural evolutions in refractory castables by in situ high temperature ESEM, 1474

Regulating wheel
Development of an ultrasonic elliptic-vibration shoe centerless grinding technique, 1780
Reinforcement rod
3D FEM modelling and its experimental verification of the rolling of reinforcement rod, 115
Rejuvenation
Rejuvenation of an inconel alloy used in gas turbines, 2051
Reliability
A probabilistic study of failures of solid and hollow dies in hot aluminum extrusion, 1740
Reliability screening
Application of numerical analysis to the optimisation of electronic component reliability screening and assembly processes, 1788
Residual stress
Effects of casting process variables on the residual stress in Ni-base superalloys, 209
Investigating the mechanisms that cause quench cracking in aluminium alloy 7010, 330
Residual stress reduction in 7175-T73, 6061-T6 and 2017A-T4 aluminium alloys using quench factor analysis, 346
Finite element analysis of the residual stress by cold expansion method under the influence of adjacent holes, 986
Effect of precipitation during quenching on the mechanical properties of the aluminium alloy 7010 in the W-temper, 998
Modelling and analysis of a deep-drawing operation: key factors for successful comparisons between experimental and simulated results, 1105
Residual stress measurement on welded specimen by neutron diffraction, 1171
Machining characteristics of mold material in high-speed grinding, 1189
Residual stress field
Experimental study on the influence of overload induced residual stress field on fatigue crack growth in aluminium alloy, 945
Resistance spot welding
On the resistance spot weldability of galvanized interstitial free steel sheets with austenitic stainless steel sheets, 1
Resolution
Multi-beam fibre-optic laser scanning system for surface defect recognition, 2065
Response surface methodology
Modelling of machinability parameters of carbon–carbon composite—a response surface approach, 920
The use of factorial design and response surface methodology for fast determination of optimal heat treatment conditions of different Ni–Co–Mo surfaced layers, 2026
Retained austenite
The role of austempering parameters on the structure and mechanical properties of heavy section ADI, 203
Effects of molybdenum and nickel additions on the structure and properties of carburized and hardened low carbon steels, 1972
Reverse engineering
Rapid tooling of die DMLS inserts for shoot-squeeze moulding (DISA) system, 1111
Manufacturing core-boxes for foundry with rapid tooling technology, 1118
Reverse gas injection molding (RGIM)
A new process of gas-assisted injection molding for faster cooling, 1201
rf magnetron sputtering
Characterization of DLC coatings deposited by rf magnetron sputtering, 804
Rheocast
Effect of rheocast and thixocast characteristics of eutectic Lead–Tin alloy sheet on deep drawing, 637

Rheological model
Simulation of metal forming during multi-pass rolling of shape bars, 108
Rheology
Microstructural evolution and rheological behaviour of aluminium alloys A356, and A356 + 0.5% Sn designed for thixocasting, 1623
Ring compression test
Study on ring compression test using physical modelling and FE simulation, 54
Estimation of extrusion stress for sintered P/M preforms-nomogram approach, 420
Rod
Elastic–plastic behaviour of an AlSiC MMC rod under combined tension and torsion loading, 1756
Roll casting
Twin roll casting of aluminum alloy strips, 42
Roller geometry
Incremental forming of solid cylindrical components using flow forming principles, 60
Rolling
Ductile–brittle transition behavior of rolled chromium, 93
3D FEM modelling and its experimental verification of the rolling of reinforcement rod, 115
Modeling of steel microstructure evolution during thermo-mechanical rolling of plate for conveying pipes, 432
Rolling-in
Manufacturing of composite workpieces with rolling tools, 323
Roll-mill
Experimental investigation of friction phenomena on the roll–material contact surface, 1519
Roll-shaped curing oven
Effect of material internal pressure in curing process of SMC roll forming, 1577
Rotating bodies
The development of hi-speed punching system using a couple of rotating bodies, 1157
Rotating tube electrode
Electric discharge machining of Al–SiC metal matrix composites using rotary tube electrode, 978
Rotational connections
Numerical determination of carrying capacity of large rolling bearings, 1696
Rough profiles
Lubricant flow between rough surfaces during closed-die forming, 707
Roughness
Optimal machining parameters selection in high speed milling of hardened steels for injection moulds, 1505
Roundness
Development of an ultrasonic elliptic-vibration shoe centerless grinding technique, 1780
RPFEM
Feature-based design of extrusion process using upper-bound and finite element techniques for extrudable shapes, 1365
RuAl
Powder metallurgy processing of ruthenium aluminum alloys, 952
Rule base
Development of a computer-aided-design system of cold forward extrusion of a spur gear, 821

Sand casting
Modelling and experimental investigation of solidification process in sand casting, 1723
Scandium
Microstructural evolution of Al–Zn–Mg–Cu–(Sc) alloy during hot extrusion and heat treatments, 1330
Scrapless progressive die
A study on the development of center carrier type progressive die for U-bending part process, 1005
Screw spike
Head forging aspects of new forming process of screw spike, 736
SEC system
A study on an intelligent system to predict the tensile stress in welding using solar energy concentration, 649
Segment blank holder module
Intelligent sheet stamping process using segment blankholder modules, 2099
Segregation
Role of segregation and precipitates on interfacial strengthening mechanisms in SiC reinforced aluminium alloy when subjected to thermomechanical processing, 758
Self-excited
Interdependence between the rolling speed and non-linear vibrations of the mill system, 2116
Semiconductor manufacturing
Generic tool for modelling and simulation of semiconductor intrabay material handling system, 1927
A simulation model to characterize photolithography process of a semiconductor wafer fabrication, 2071
Semi-solid
Casting of a cold work steel alloy in semi-solid state, 1357
Microstructural evolution and rheological behaviour of aluminium alloys A356, and A356 + 0.5% Sn designed for thixocasting, 1623
Thixoextrusion of an A356 alloy: microstructural studies and high temperature fatigue behaviour, 1629
Semi-solid die casting
Semi-solid die casting process with three steps die system, 442
Numerical visualization of viscosity in phase transformation forming process with controlled liquid fraction, 450
Semi-solid materials
Effect of macrostructure and microstructure on the viscosity of the A356 alloy in the semi-solid state, 300
Sensor
Experimental investigation of friction phenomena on the roll–material contact surface, 1519
Sequential injection moulding
Injection moulding of automotive components: comparison between hot runner systems for a case study, 1497
Shape complexity
A new definition of shape complexity for metal extrusion, 1734
A probabilistic study of failures of solid and hollow dies in hot aluminum extrusion, 1740
Shape memory alloys
Mandrel drawing and plug drawing of shape-memory-alloy fine tubes used in catheters and stents, 145
Development of shape memory actuated ITU Robot Hand and its mine clearance compatibility, 1390
Shape memory effect
Long-term ageing behaviour of martensite in shape memory Cu–Al–Ni alloys, 164
Shape and profile
Modelling of work roll edge contact in thin strip rolling, 1280
Sharpness
Cutting sharpness measurement: a critical review, 261
Shear band
Dynamic mechanical behavior of pure titanium, 1889
Shearing process
Investigation on blanking of thin sheet metal using the ductile fracture criterion and its experimental verification, 1935
Sheet hydro forming
Numerical/experimental analysis of the sheet hydro forming process using cylindrical, square and compound shaped cavities, 1435

Sheet material
Development of process design system for press forming—multi-objective optimization of intermediate die shape in transfer forming, 1564
Sheet metal formability
Numerical/experimental analysis of the sheet hydro forming process using cylindrical, square and compound shaped cavities, 1435
Sheet metal forming
Optimisation of magnesium alloy stamping with local heating and cooling using the finite element method, 319
Stamping of automotive components: a numerical and experimental investigation, 1489
Influence of the plasticity model in sheet metal forming simulations, 1596
Wrinkling of anisotropic metal sheets under deep-drawing: analytical and numerical study, 1604
Influence of pitch and cross-sectional ratio of strip of sheet metal on incremental in-plane bending, 1810
A benchmark for validation of numerical results in sheet metal forming, 1980
Sheet steel
Improved prediction of springback on final formed components, 464
Sheets
Microscopic study regarding the microstructure evolution of the 8006 alloy in the plastic deformation process, 408
Shot peening
Optimization of shot peening parameters using Taguchi technique, 925
Sigma phase
Precipitation of carbides and sigma phase in AISI type 446 stainless steel under working conditions, 1681
Silicon bronze
The effect of complex strain path on the properties of CuSi5 silicon bronze, 1144
Simulation
Computer simulation of the thermal regime of double-loop channel induction furnaces, 386
3D modelling of multipass welding of a 316L stainless steel pipe, 457
Computational mechanics of laser cladding process, 494
Computer simulation of the thermal behaviour of a work roll during hot rolling of steel strip, 894
Simulation of friction welding using a developed computer program, 1011
Effects of varying slotted tube (stent) geometry on its expansion behaviour using finite element method, 1764
Finite element simulation of slotted tube (stent) with the presence of plaque and artery by balloon expansion, 1772
A simulation model to characterize photolithography process of a semiconductor wafer fabrication, 2071
Computer simulation of the thermal regime of double-loop channel induction furnaces, 2093
Sintering
Processing of novel glass matrix composites by microwave heating, 1749
Slab method
Efficient algorithmic approach for mixed-lubrication in cold rolling, 307
Slotted tube
Effects of varying slotted tube (stent) geometry on its expansion behaviour using finite element method, 1764
Finite element simulation of slotted tube (stent) with the presence of plaque and artery by balloon expansion, 1772
SLS
A note on rapid metal composite tooling by selective laser sintering, 28
SMC
Effect of material internal pressure in curing process of SMC roll forming, 1577
Sn microstructure
Microstructural evolution and rheological behaviour of aluminium alloys A356, and A356 + 0.5% Sn designed for thixocasting, 1623
Solder
Investigation of Sn–Pb solder bumps of prototype photo detectors for the LHCb experiment, 1668
Solder alternative
The development of a tri-material system and appropriate bonding parameters for the thermal bonding of flat leads, 240
Solenoid
Simulation of the magnetic properties for common rail electro-injector, 1611
Solid freeform
Defects and prevention in ceramic components fabricated by inkjet printing, 1286
Solid phase transformations
The cooling process in gas quenching, 1881
Solid–air composites
Static load dispersion analysis of solid–air composites. Effect of adhesive film on the load dispersion, .1551
Spatter free ignition
On line leak testing of welded water heaters, 1164
SPD
Finite element modelling of an Al–Mn alloy by equal channel angular extrusion (ECAE), 846
A method for continuous processing of materials by ECAP processes, 2126
Specific cutting force coefficient
Cutting dynamic force modelling of endmilling operation, 1383
Spheroidal cast iron
Image analysis automation of spheroidal cast iron, 853
Spin forming
Design improvement of spin forming of magnesium alloy tubes using finite element, 816
Spinel structure
Study on the properties of the copper substituted NiZn ferrites, 797
Spot welding
Application of impact tensile testing to spot welded sheets, 80
Spring-back
Cold roll forming for high tensile strength steel sheet proposition on forming of thin spring steel sheet pipe, 247
Springback
Numerical simulation of springback using enhanced assumed strain elements, 314
Improved prediction of springback on final formed components, 464
Modelling and analysis of a deep-drawing operation: key factors for successful comparisons between experimental and simulated results, 1105
Spur gear
Development of a computer-aided-design system of cold forward extrusion of a spur gear, 821
Square-cup deep-drawing
Intelligent sheet stamping process using segment blankholder modules, 2099
Stainless steel
On the resistance spot weldability of galvanized interstitial free steel sheets with austenitic stainless steel sheets, 1
Drilling of conventional cast stainless steel with HIPed NiTi coating, 622
A semi-empirical model of the temperature field in the AISI 304 laser welding, 1235
Precipitation of carbides and sigma phase in AISI type 446 stainless steel under working conditions, 1681

Stainless steel welded joints
Analysis of stainless steel welded joints: a comparison between destructive and non-destructive techniques, 1893
Stamping
Comparison stamping and hydro-mechanical forming process for an automobile fuel tank using finite element method, 550
Stamping process
Intelligent sheet stamping process using segment blankholder modules, 2099
Static load dispersion
Static load dispersion analysis of solid–air composites. Effect of adhesive film on the load dispersion, .1551
Steel
Modeling of surface finish in electro-discharge machining based upon statistical multi-parameter analysis, 1247
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
An analysis of combined cyclic heat treatment performance, 1704
Stents
Mandrel drawing and plug drawing of shape-memory-alloy fine tubes used in catheters and stents, 145
Stereolithography
Composite rapid prototyping: overcoming the drawback of poor mechanical properties, 526
Strain hardening
Anomalous plastic behavior of fine-grained MP35N alloy during room temperature tensile testing, 1905
Strain intensity
Theoretical and experimental analysis of the effect of die shape on the internal quality of forged rods, 571
Strain paths
The effect of cyclic strain path on the properties and structure of CuAl10 aluminium bronze, 1138
The effect of complex strain path on the properties of CuSi5 silicon bronze, 1144
Strain rate
Deformation behavior of Inconel 690 super alloy evaluated by impact test, 219
High-strain-rate testing of beryllium copper at elevated temperatures, 1051
Stress distribution
Theoretical and experimental analysis of the rolling process of bimetallic rods Cu-steel and Cu-Al, 100
Stress intensity factor
Experimental study on the influence of overload induced residual stress field on fatigue crack growth in aluminium alloy, 945
Stress relaxation
Constitutive modelling of primary creep for age forming an aluminium alloy, 122
Stretch-blow moulding
Coupled temperature–displacement modelling of injection stretch-blow moulding of PET bottles using Buckley model, 20
Strip casting
Twin roll casting of aluminum alloy strips, 42
Semi-solid manufacturing process of magnesium alloys by twin-roll casting, 1662
Strip process layout
A study on the development of center carrier type progressive die for U-bending part process, 1005
Structure
The effect of cyclic strain path on the properties and structure of CuAl10 aluminium bronze, 1138
The effect of complex strain path on the properties of CuSi5 silicon bronze, 1144
Submerged arc surfacing
Submerged arc surfacing of Ni–Co–Mo alloys similar to maraging steels on a structural steel, 2011
Submicrometer powders
Preparation of nickel and copper submicrometer particles by pyrolysis of their formates, 1058
Sulfur element
Life prediction under sulfuric acid environment of FRP using X-ray analysis microscope, 1558
Superalloys
Microstructural instability in coated single crystal superalloys, 660
Superheat temperature
Effects of casting process variables on the residual stress in Ni-base superalloys, 209
Superplastic forming
Experimental and numerical investigation of the weld repair of superplastic forming dies, 1673
Superplasticity
Representing the superplasticity of Inconel 718, 694
Analysis of void growth in superplastic materials, 1273
Super-smooth surface
Laser removal of micron contaminant colloidal refractory and poor laser absorption particles from super-smooth optical substrate, 1074
Surface
Engineering of surface layer in material removal machining, 1451
Surface defects
Multi-beam fibre-optic laser scanning system for surface defect recognition, 2065
Surface finish
An expert system based on FBFN using a GA to predict surface finish in ultra-precision turning, 1150
Surface hardening
Electron beam surface melting of as cast and austempered ductile irons, 199
Surface layer
Application of high power diode laser (HPDL) for alloying of X40CrMoV5-1 steel surface layer by tungsten carbides, 1956
Surface melting
Electron beam surface melting of as cast and austempered ductile irons, 199
Surface morphology
A comparison of elevated temperature erosion resistance of four new HVCC coatings with other wire sprayed coatings, 7
Surface quality
Integrity of ground cylindrical surface, 714
Surface roughness
Comparison of gases applications to wet and dry cuttings in turning, 35
Analysis of the influence of EDM parameters on surface quality, MRR and EW of WC–Co, 1026
A study on the electrical discharge machining of conductive ceramics, 1033
Electrical discharge machining of conductive CVD diamond tool blanks, 1227
High temperature oxide scale characteristics of low carbon steel in hot rolling, 1307
Surface strains
Thermal fatigue testing of chromium martensitic hot-work tool steel after different austenitizing treatments, 1089
Surface tension
Study on mechanism of mechanical damping system based on the colloidal suspension of nano-porous particles, 565
Surface texture
Modeling of surface finish in electro-discharge machining based upon statistical multi-parameter analysis, 1247
SVD
Design of ANFIS networks using hybrid genetic and SVD methods for the modelling of explosive cutting process, 1415

Taguchi technique
Optimization of shot peening parameters using Taguchi technique, 925
Tangent bender
Cold roll forming for high tensile strength steel sheet proposition on forming of thin spring steel sheet pipe, 247
Tangential cutting force
Cutting dynamic force modelling of endmilling operation, 1383
Technological database
A model of simulation environment for prediction and optimisation of production processes, 1641
Technological parameters
Theoretical and experimental analysis of the effect of die shape on the internal quality of forged rods, 571
Telescoping ball-bar
Quick check error verification of coordinate measuring machines, 1207
TEM
The effect of surface pretreatment and moisture on the fatigue performance of adhesively-bonded aluminium, 359
Tensile deformation mechanisms at different temperatures in the Ni-base superalloy GTD-111, 1900
Temper bead welding
Eliminating post-weld heat treatment in repair welding by temper bead technique: role bead sequence in metallurgical changes, 392
Temperature effect
Effects of injection molding weld on fatigue crack resistance of CPVC at different temperatures, 1261
Tensile behavior
Tensile deformation mechanisms at different temperatures in the Ni-base superalloy GTD-111, 1900
Tensile properties
The influence of hot deformation on the exfoliation corrosion behaviour of aluminium alloy 2025, 185
Effect of heat treatment on the tensile properties of Al–Li alloys, 603
Improvement of formability from room temperature to warm temperature in AZ-31 magnesium alloy, 1313
Tensile stress
A study on an intelligent system to predict the tensile stress in welding using solar energy concentration, 649
Testing method
A novel and simple method for the measurement of plane strain work hardening, 1616
Texture
Improvement of formability from room temperature to warm temperature in AZ-31 magnesium alloy, 1313
7010
The application of advances in quench factor analysis property prediction to the heat treatment of 7010 aluminium alloy, 674
The slip-line field elemental technique
Application of the slip-line field method to the analysis of die cavity filling, 729
Thermal
Modelling and experimental investigation of solidification process in sand casting, 1723
Thermal bonding
The development of a tri-material system and appropriate bonding parameters for the thermal bonding of flat leads, 240
Thermal conductivity
Thermal properties of diamond particle-dispersed Cu composites, 514
Monte Carlo simulation of the effective thermal conductivity in two-phase material, 741
Analysis of an inverse method of simultaneous determination of thermal conductivity and heat of phase transformation in steels, 1317
Thermal cycle
Mechanical and metallurgical investigation of martensite–austenite constituents in simulated welding conditions, 87
Thermal deformation
Development and verification of a computer model for thermal distortions in hard turning, 1821
Thermal diffusivity
Thermal properties of diamond particle-dispersed Cu composites, 514
Thermal effects
Modeling the thermal and thermoelastic responses of work rolls used for hot rolling steel strip, 886
Thermal elastic-plastic analysis
Investigation of residual stress and post weld heat treatment of multi-pass welds by finite element method and experiments, 1690
Thermal fatigue
Thermal fatigue testing of chromium martensitic hot-work tool steel after different austenitizing treatments, 1089
Thixoextrusion of an A356 alloy: microstructural studies and high temperature fatigue behaviour, 1629
Thermal profile
Computer simulation of the thermal behaviour of a work roll during hot rolling of steel strip, 894
Thermal shock
Thermal shock resistance of electroslag cast steel for hot-working tools, 2122
Thermal spray
HVOF coating of Inconel 625 onto stainless and carbon steel surfaces: corrosion and bond testing, 2051
Thermal spraying
2.45 GHz microwave plasma system for high-velocity thermal spraying, 294
Thermal stability
Thermal stability and mechanical properties of Al-based amorphous alloys, 829
Thermal stress
Laser heating of sheet metal and thermal stress development, 2045
Thermography
Heat transfer in semi-transparent materials during laser interaction, 1805
Thermo-mechanical finite element analysis
Numerical finite element investigation on laser cladding treatment of ring geometries, 1443
Thickness loss
Fabrication of a polymer microstructure by a modified DXRL process, 1097
Thin film lubrication regime
Lubricant flow between rough surfaces during closed-die forming, 707
Thin metal sheet
The development of hi-speed punching system using a couple of rotating bodies, 1157
Thin spring steel sheet pipe
Cold roll forming for high tensile strength steel sheet proposition on forming of thin spring steel sheet pipe, 247
Thin strip
Modelling of work roll edge contact in thin strip rolling, 1280
Thixocast
Effect of rheocast and thixocast characteristics of eutectic Lead–Tin alloy sheet on deep drawing, 637
Thixocasting
Casting of a cold work steel alloy in semi-solid state, 1357

Thixo-forming
Effect of macrostructure and microstructure on the viscosity of the A356 alloy in the semi-solid state, 300
Thread rolling
New method of thread rolling, 722
Three steps die system
Semi-solid die casting process with three steps die system, 442
γ-TiAl
The effect of single and multiple overloads on the fatigue crack growth of high strength titanium aluminides, 615
Ti–6Al–4V
The effect of combined cycle fatigue upon the fatigue performance of TI–6AL–4V fan blade material, 374
TiC
Comparative wear characteristics of tin and tic coated and uncoated tool steel, 1923
Time and frequency domain analyses
The impact of cutting conditions on cutting forces and vibration signals in turning with plane face geometry inserts, 1708
Time series modelling
Natural mode estimation of cutting dynamics with time series modelling, 1373
TiN
Comparative wear characteristics of tin and tic coated and uncoated tool steel, 1923
TiN coated carbide tools
Performance of P10 TiN coated carbide tools when end milling AISI H13 tool steel at high cutting speed, 1062
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
Titanium
The mechanochemical processing of aerospace metals, 472
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
Dynamic mechanical behavior of pure titanium, 1889
Titanium nitride
Determination of the optimum TiN coating thickness on WC inserts for machining carbon steels, 1861
Tool life
Effect of high-pressure coolant supply when machining nickel-base, Inconel 718, alloy with coated carbide tools, 1045
Performance of P10 TiN coated carbide tools when end milling AISI H13 tool steel at high cutting speed, 1062
Tool steel
Surface modification of tool steel by $MOS_2$ powder shooting, 170
Comparative wear characteristics of tin and tic coated and uncoated tool steel, 1923
Tool wear
Tool wear prediction in turning, 276
Tooling/workpiece interface
Advanced simulations for hot forging: heat transfer model for use with the finite element method, 1912
Touch probe
Reduction of machining errors of a three-axis machine tool by on-machine measurement and error compensation system, 2056
Toughness
Mechanical and metallurgical investigation of martensite–austenite constituents in simulated welding conditions, 87
Fracture toughness of welds—effect of brittle zones and strength mismatch, 537
An analysis of combined cyclic heat treatment performance, 1704
Transfer press forming
Development of process design system for press forming—multi-objective optimization of intermediate die shape in transfer forming, 1564
Transition
Effect of prestraining and strain-aging on toughness of MnMoNi steel weld metal, 1124
Tribological characteristics
Tribological characteristics and cutting performance of $Cr_{x\%}C$-coated carbide tools, 699
Tryout
A study on the development of center carrier type progressive die for U-bending part process, 1005
TSP
Optimizing drilling conditions in printed circuit board by considering hole quality. Optimization from viewpoint of drill-movement time, 1544
Tube
Direct and inverted open die extrusion (ODE) of rods and tubes, 765
Tube bending
Development of a novel method of tube bending using finite element simulation, 128
7075 tubes
Effects of pre-treatment conditions on warm hydroformability of 7075 aluminum tubes, 1337
Turbine
Rejuvenation of an inconel alloy used in gas turbines, 2051
Turning
Comparison of gases applications to wet and dry cuttings in turning, 35
Finite element analysis of ultrasonically assisted turning of Inconel 718, 233
An expert system based on FBFN using a GA to predict surface finish in ultra-precision turning, 1150
Twin roll caster
Twin roll casting of aluminum alloy strips, 42
Twinning
Study of plastic deformation modes in zirconium by color image analysis, 281
Twin-roll caster
Semi-solid manufacturing process of magnesium alloys by twin-roll casting, 1662

U-bending process
A study on the development of center carrier type progressive die for U-bending part process, 1005
Ultrasonic elliptic-vibration shoe
Development of an ultrasonic elliptic-vibration shoe centerless grinding technique, 1780
Ultrasonic machining
Finite element analysis of ultrasonically assisted turning of Inconel 718, 233
Unloading
Analysis of the elastic characteristics at die and workpiece to improve the dimensional accuracy for cold forged part, 1081
Upper-bound technique
Energetic analysis of the drawing process by upper-bound techniques, 1220
Feature-based design of extrusion process using upper-bound and finite element techniques for extrudable shapes, 1365
Urethane
Development of a novel method of tube bending using finite element simulation, 128
USDFLD
Comparison of ductile failure models using a simple elastic–plastic based degradation model, 1214

Vacuum casting
Composite rapid prototyping: overcoming the drawback of poor mechanical properties, 526
Vectorial based segmentation
Study of plastic deformation modes in zirconium by color image analysis, 281

Velocity uniformity
Computational study of velocity distribution and pressure drop for designing some gas quench chamber and furnace ducts, 1727
Vertical vibration
Evaluation of two-component powder mixing by vertical vibration. Investigation of powder behavior and mixed state by internal pressure fluctuation, 1571
V-groove
Fabrication of a V-groove on the optical fiber connector using a miniaturized machine tool, 1716
Vibration signals
The impact of cutting conditions on cutting forces and vibration signals in turning with plane face geometry inserts, 1708
Vickers hardness
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
Analysis of stainless steel welded joints: a comparison between destructive and non-destructive techniques, 1893
Virtual environment
Virtual reality applications in manufacturing process simulation, 1834
Virtual manufacturing
Virtual reality applications in manufacturing process simulation, 1834
Virtual reality
Virtual reality applications in manufacturing process simulation, 1834
Viscosity
Effect of macrostructure and microstructure on the viscosity of the A356 alloy in the semi-solid state, 300
VOF method
Evolution of void growth around cylindrical inclusions using the VOF technique, 608
Voids growth
Analysis of void growth in superplastic materials, 1273

Warm hydroforming
Effects of pre-treatment conditions on warm hydroformability of 7075 aluminum tubes, 1337
Waveguide
An atmospheric microwave plasma jet for ceramic material processing, 288
Wear
Machining characteristics of novel-abrasion resistant iron, 751
Tribological (wear) properties of aluminum–silicon eutectic base alloy under dry sliding condition, 833
Hot deformation and wear resistance of P/M aluminium metal matrix composites, 1395
The effect of coating and nitriding on the wear behaviour of tool steels, 1918
Comparative wear characteristics of tin and tic coated and uncoated tool steel, 1923
Wear mechanism
Wear mechanism of TiN coated carbide and uncoated cermets tools at high cutting speed applications, 1067
Wear properties
Investigation of wear properties of magnesium and aluminum alloys for automotive applications, 1526
Wear resistance
Effects of casting temperature on the microstructure and wear resistance of compocast A356/$SiC_p$ composites: a comparison between SS and SL routes, 1874
Improvement of wear resistance of hot work steels by PVD coatings deposition, 1995
Wear tracks
Investigation of wear properties of magnesium and aluminum alloys for automotive applications, 1526
Weld
Fracture toughness of welds—effect of brittle zones and strength mismatch, 537
Weld imperfections
The significance of weld imperfections and surface peening on fatigue crack propagation life of butt-welded joints, 931
Weld interface
Fatigue properties of inertia dissimilar friction-welded stainless steels, 1402
Weld line
Effects of injection molding weld on fatigue crack resistance of CPVC at different temperatures, 1261
Weldability
Weldability of austenitic manganese steel, 596
Weld-bond
Thermal stresses developed in weld-bonded joints, 971
Welding
Resistance spot welding simulation: a general finite element formulation of electrothermal contact conditions, 436
3D modelling of multipass welding of a 316L stainless steel pipe, 457
Simulation of friction welding using a developed computer program, 1011
Residual stress measurement on welded specimen by neutron diffraction, 1171
Experimental and numerical investigation of the weld repair of superplastic forming dies, 1673
Welding criteria
The prediction of seam welds quality in aluminum extrusion, 366
Welding residual stress
Investigation of residual stress and post weld heat treatment of multi-pass welds by finite element method and experiments, 1690
Wettability
Ageing time of wettability on polypropylene surfaces processed by cold plasma, 519
Wetting
Effect of substrate crystallographic orientation on wettability and adhesion in several representative systems, 1256
Wire casting
Effects of process variables on the multi-strand casting of high strength sub-millimetre metallic glass wire, 1344
Wire drawing
Comparison of ductile failure models using a simple elastic–plastic based degradation model, 1214
Work hardening
A novel and simple method for the measurement of plane strain work hardening, 1616
Work roll edge contact
Modelling of work roll edge contact in thin strip rolling, 1280
Wrinkling
Wrinkling of anisotropic metal sheets under deep-drawing: analytical and numerical study, 1604
W-temper
Effect of precipitation during quenching on the mechanical properties of the aluminium alloy 7010 in the W-temper, 998

X-ray analysis microscope
Life prediction under sulfuric acid environment of FRP using X-ray analysis microscope, 1558
X-ray diffraction
Oxide scales growth of low-carbon steel at high temperatures, 1300

Determination of the optimum TiN coating thickness on WC inserts for machining carbon steels, 1861

Yield criterion
Influence of the plasticity model in sheet metal forming simulations, 1596

Yield strength
An analysis of combined cyclic heat treatment performance, 1704

Yttrium
Microstructure and properties of the new Pt–Rh based alloys for high-temperature applications, 681
